

# MEGApix® IVA 2.1MP/1080p pinhole ATM IP camera

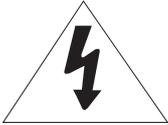

DWC-MPH2W28TW - IVA license pre-loaded  
DWC-MPPH2W28TW - IVA+ license pre-loaded

## *User's Manual* Ver. 05/23

Before installing and using the camera, please read this manual carefully.  
Be sure to keep it handy for future reference.

# Safety Information

## CAUTION

RISK OF ELECTRIC SHOCK.  
DO NOT OPEN.

### CAUTION :

TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK) NO USER SERVICEABLE PARTS INSIDE.

REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

#### Warning

This symbol indicates that dangerous voltage consisting of a risk of electric shock is present within this unit.

#### Precaution

This exclamation point symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

#### WARNING

To prevent damage that may result in fire or electric shock hazards, do not expose this appliance to rain or moisture.

#### WARNING

1. Be sure to use only the standard adapter that is specified in the specification sheet. Using any other adapter could cause fire, electrical shock, or damage to the product.
2. Incorrectly connecting the power supply or replacing the battery may cause an explosion, fire, electric shock, or damage to the product.
3. Do not connect multiple cameras to a single adapter. Exceeding the capacity may cause excessive heat generation or fire.
4. Securely plug the power cord into the power receptacle. An insecure connection may cause fire.
5. When installing the camera, fasten it securely and firmly. A falling camera may cause personal injury.
6. Do not place conductive objects (e.g. screwdrivers, coins, metal items, etc.) or containers filled with water on top of the camera. Doing so may cause personal injury due to fire, electric shock, or falling objects.
7. Do not install the unit in humid, dusty, or sooty locations. Doing so may cause fire or electric shock.
8. If any unusual smells or smoke come from the unit, stop using the product. Immediately disconnect the power source and contact the service center. Continued use in such a condition may cause fire or electric shock.
9. If this product fails to operate normally, contact the nearest service center. Never disassemble or modify this product in any way.
10. When cleaning, do not spray water directly onto parts of the product. Doing so may cause fire or electric shock.

#### Precaution

##### Operating

- Before using, make sure the power supply and all other parts are properly connected.
- While operating, if any abnormal condition or malfunction is observed, stop using the camera immediately and contact your dealer.

##### Handling

- Do not disassemble or tamper with parts inside the camera.
- Do not drop the camera or subject it to shock or vibration as this can damage the camera.
- Clean the clear dome cover with extra care. Scratches and dust can ruin the quality of the camera image.

##### Installation and Storage

- Do not install the camera in areas of extreme temperature, exceeding the allowed range.
- Avoid installing in humid or dusty environments.
- Avoid installing in places where radiation is present.
- Avoid installing in places where there are strong magnetic fields and electric signals.
- Avoid installing in places where the camera would be subject to strong vibrations.
- Never expose the camera to rain or water.

# Important Safety Instructions

- 1. Read these Instructions.** - All these safety and operating instructions should be read before the product is installed or operated.
- 2. Keep these Instructions.** - The safety, operating and use instructions should be retained for future reference.
- 3. Heed all warnings.** - All warnings on the product and in the operating instructions should be adhered to.
- 4. Follow all instructions.** - All operating and use instructions should be followed.
- 5. Do not use this device near water.** - For example: near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement; near a swimming pool; etc.
- 6. Clean only with a dry cloth.** - Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners.
- 7. Do not block any ventilation openings. Install following the manufacturer's instructions.** - Slots and openings in the cabinet are provided for ventilation, to ensure reliable operation of the product and to protect it from overheating. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surfaces. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided and the manufacturer's instructions have been adhered to.
- 8. Do not install near any heat sources such as radiators, heat registers, or other apparatus (including amplifiers) that produce heat.**
- 9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong is provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for the replacement of the obsolete outlet.**
- 10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles and the point where they exit from the apparatus.**
- 11. Only use attachments/accessories specified by the manufacturer.**
- 12. Use only with cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.**
- 13. Unplug this apparatus during lightning storms or when unused for long periods.**
- 14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.**

## Disposal of Old Appliances

1. When this crossed-out wheel bin symbol is attached to a product it means the product is covered by the European Directive 2002/96/EC.
2. All electrical and electronic products should be disposed of separately from the municipal waste stream per laws designated by the government or the local authorities.
3. The correct disposal of your old appliance will help prevent potential negative consequences for the environment and human health.
4. For more detailed information about disposal of your old appliance, please contact your city office, waste disposal service, or the shop where you purchased the product.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

# Introduction - Product and Accessories

✦ Please check that the camera and all accessories are included in the package.

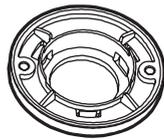

Camera  
(Cable Length: 2.13ft/ 6.5m)

Main Unit

Double-Sided Tape  
for Pinhole Cover

Rotating Ring

Pinhole Cover

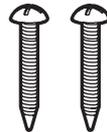

4-Pin Terminal Block

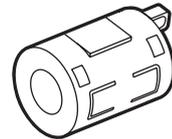

Surface Mount  
Bracket

Pan/Tilt Bracket

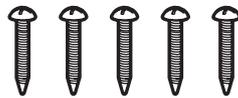

Tapping Screws  
(TP1 M3x20) 2ea

Ferrite Core

Anchor Blocks  
(M4x25) 5ea

Tapping Screws  
(TS1 M4x25) 5ea

Screws  
(TP2 M3x6(Ni)) 2ea

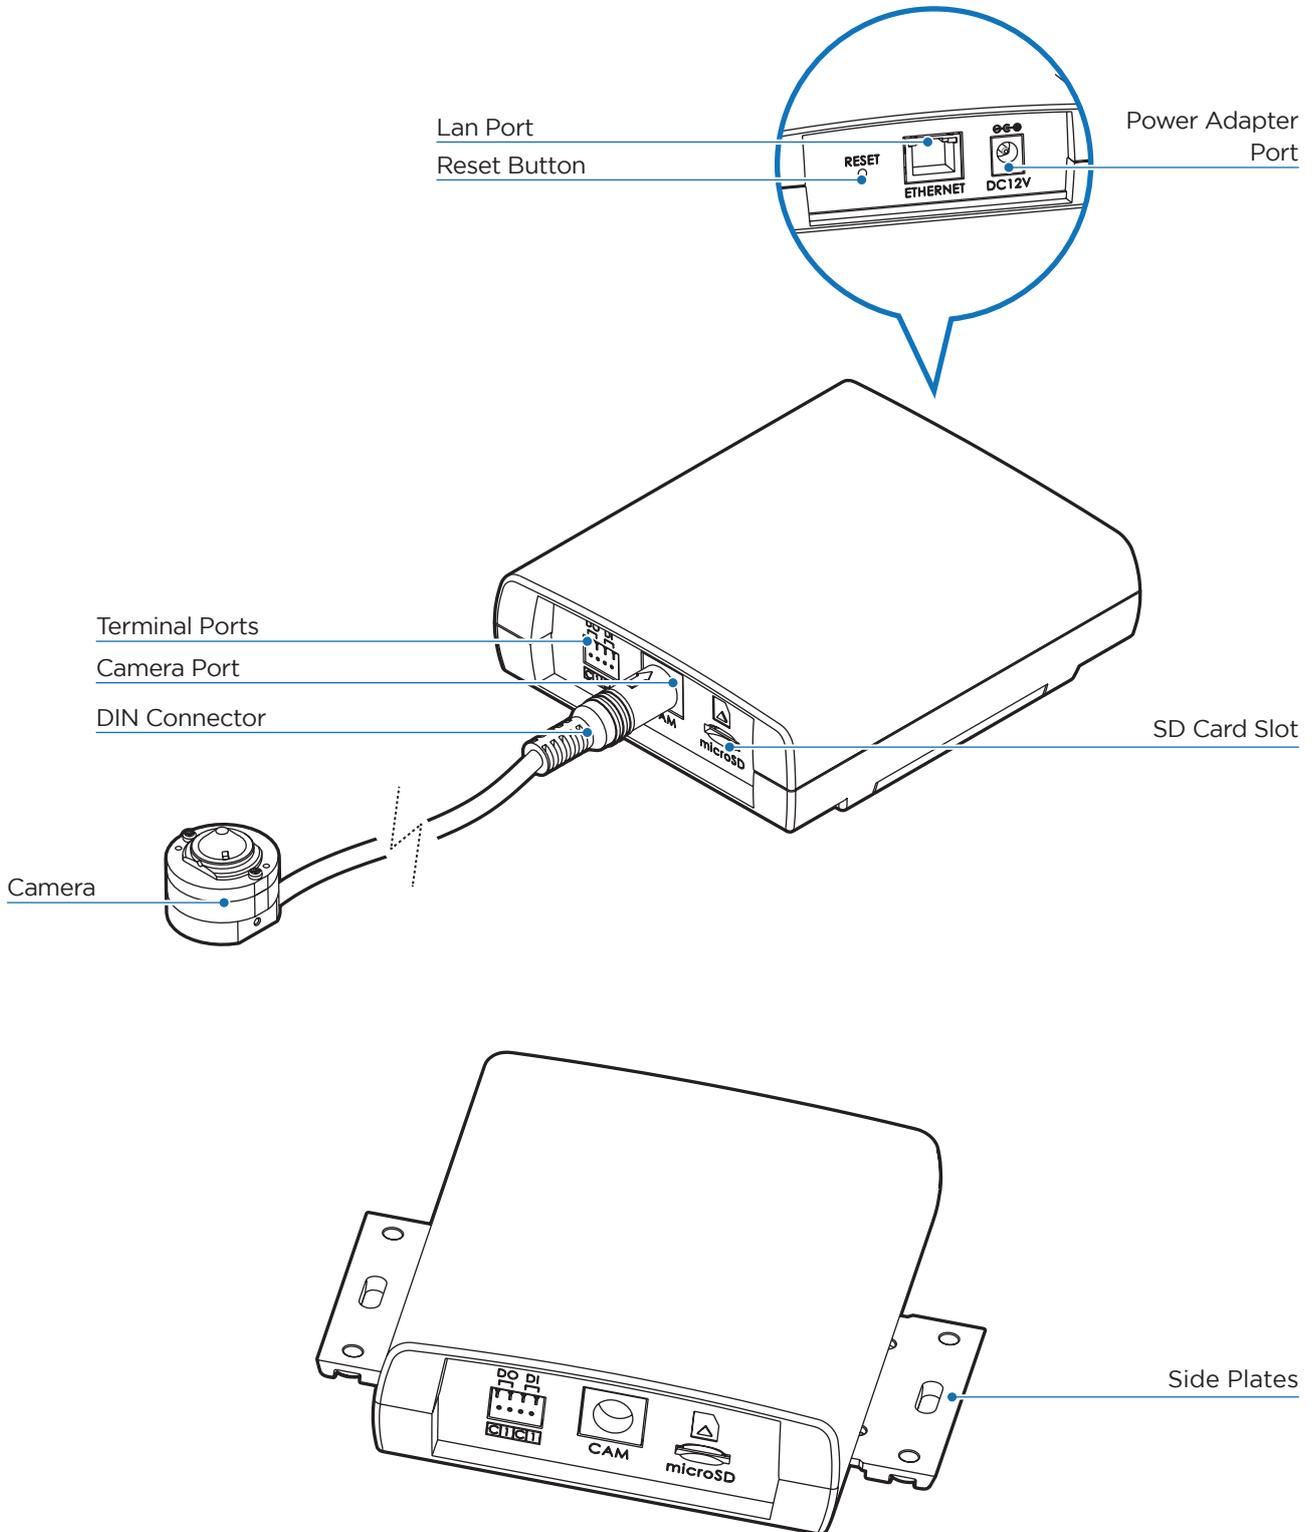

Cable Clamps 3ea

Tapping Screws  
(TP1 M4x20) 3ea

# Introduction - Part Name

---

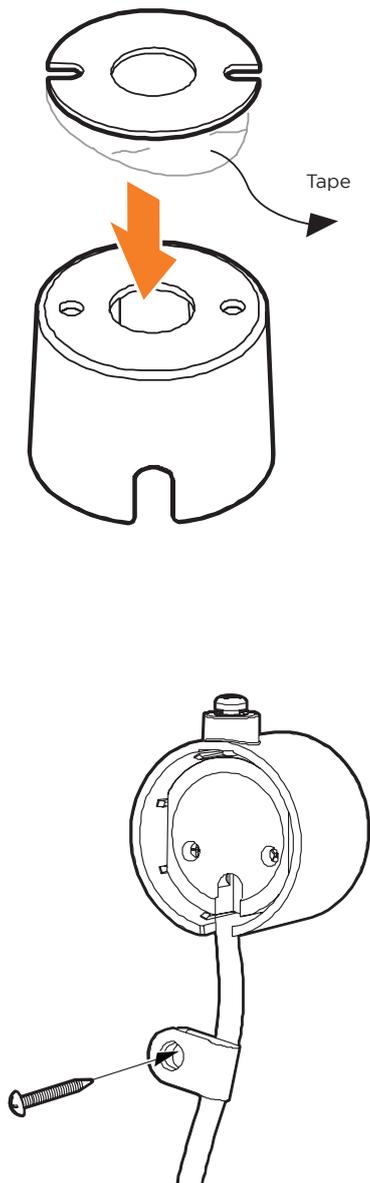

# Installation - Installation

---

## Before installing your camera, you have to read the following cautions.

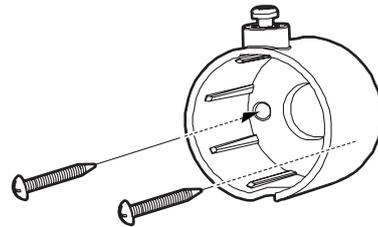

1. The mounting surface must support five times the camera weight.
2. Protect the cables. If the cover of the electrical line becomes damaged, this may cause a short or fire.
3. Pass the wires through and make all necessary connections. See page 9 for more information.
4. Install the ferrite core on the LAN cable to reduce high-frequency noise:
  - Open the ferrite core by lifting the closing clip.
  - Make one loop with the cable through the ferrite core.
  - Close the ferrite core to hold the cable loop in place.

## Concealed installation:

(Camera is mounted **BEHIND** the mounting surface, with the lens peeping through)

1. Drill a hole (diameter: 0.11"/ 3mm) on the mounting surface where the camera lens will be installed.
2. Peel off one side of the double-sided tape include with the camera and attach it to the flat surface of the pinhole cover. Aligning the grooves on the tape with the screw holes on the pinhole cover.
3. Peel off the other side of the tape and stick to the mounting surface. Align the pinhole cover and the mounting surface, keeping the top screw at the top of the pinhole cover upright.
4. Secure the pinhole cover to the mounting surface using the tapping screws (M3x20) included with the camera.

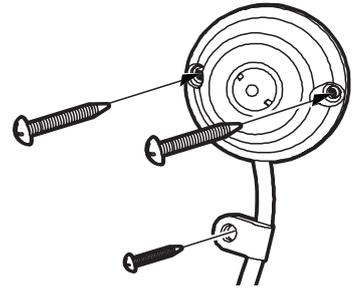

5. Pass the camera's cable through the cable holder on the pinhole cover and place the camera module inside the pinhole cover. The camera lens should be facing the mounting surface, aligned with the 1mm hole drilled in #1. Tighten the top screw head to fix the camera module in place.
6. Use the cable clamps to secure the camera's cable with a tapping screw (M4x20) included with the camera (optional).

# Installation - Installation

---

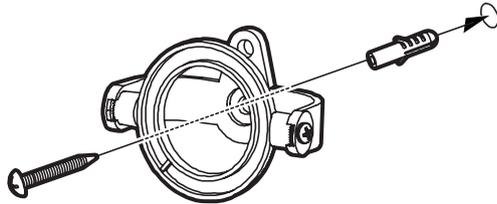

## Visible installation:

1. Place the camera module on the installation surface.
2. Pass the camera module's cable into the cable holder on the bracket and cover the camera module with the surface mount bracket.
3. Secure the bracket to the mounting surface using the tapping screws (M3x20) and anchor blocks included with the camera.
4. Use the cable clamps to secure the camera's cable with a tapping screw (M4x20) included with the camera (optional).

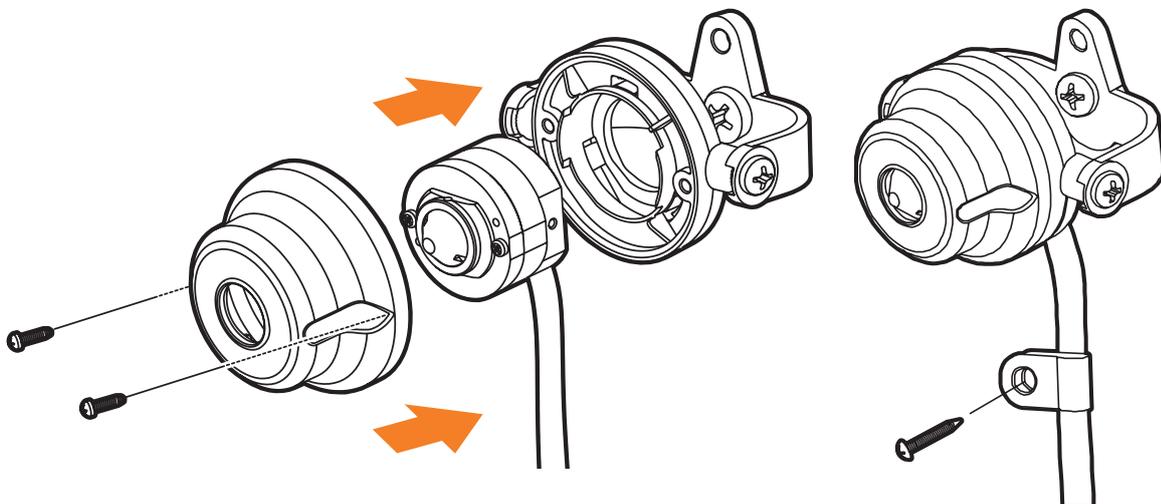

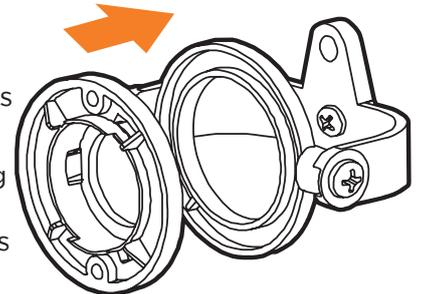

## Visible installation with the pan/tilt bracket:

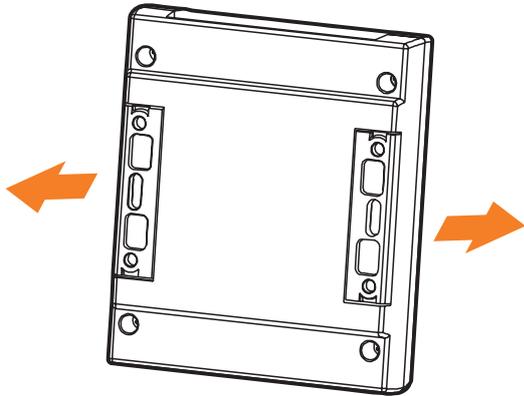

1. Drill a hole on the mounting surface and insert an anchor block into the hole.
2. Secure the pan/tilt bracket to the mounting surface using the tapping screws (M4x25) included and tighten it into the anchor block.

3. Press the rotate ring into the bracket's mount ring.
4. Place the camera module on the pan/tilt bracket. Make sure the lens is facing outward from the bracket.
5. Secure the surface mount bracket on top of the camera module using the tapping screws (M3x6) included. Align the screw holes with the holes on the rotate ring on the pan/tilt bracket and tighten the screws to secure.
6. Use the cable clamps to secure the camera's cable with a tapping screw (M4x20) included with the camera (optional).

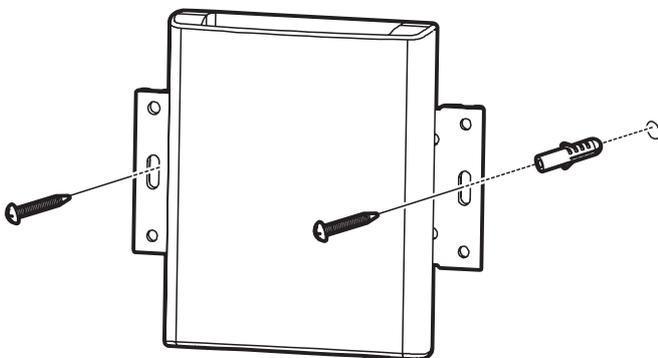

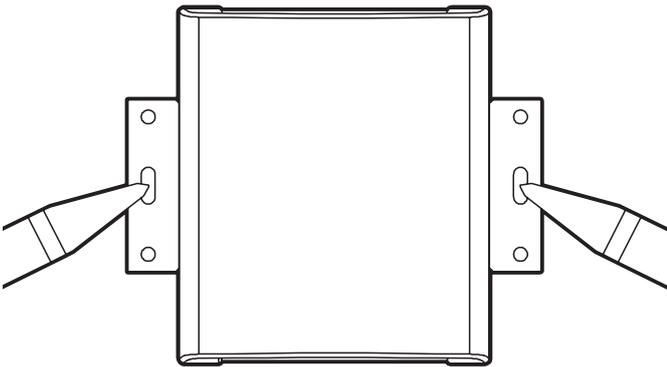

# Installation - Installation

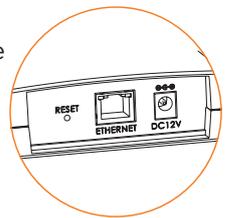

## Main Unit Installation

1. Pull out the slide plates at the bottom of the main unit.
2. Using the main unit, mark and drill the necessary holes in the mounting surface to align with the slide plates' holes.
3. Insert the anchor blocks and tighten them into the mounting surface.
4. Align the main unit with the mounting holes and secure it to the mounting surface using the included tapping screws.

### ⚠️ **Reset to the Factory Default**

Resetting the camera: Press the reset button in the back of the main unit. Pressing the button for five (5) seconds will initiate a camera-wide reset of all the settings, including the network settings.

### ⚠️ **Warning:**

If you press the 'Reset' button, you will lose all setting data. If needed, please, make a note for further installation.

# Installation - Cabling

## Two Options

Use a PoE-enabled switch to connect data and power through a single cable and begin viewing and recording images instantly. A non-PoE switch will require an adaptor for power transmission.

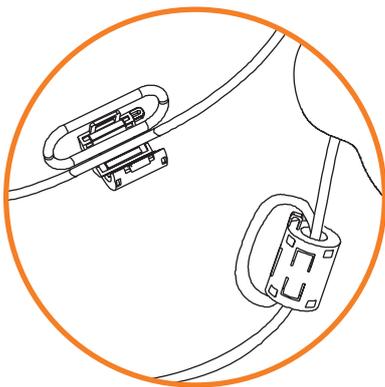

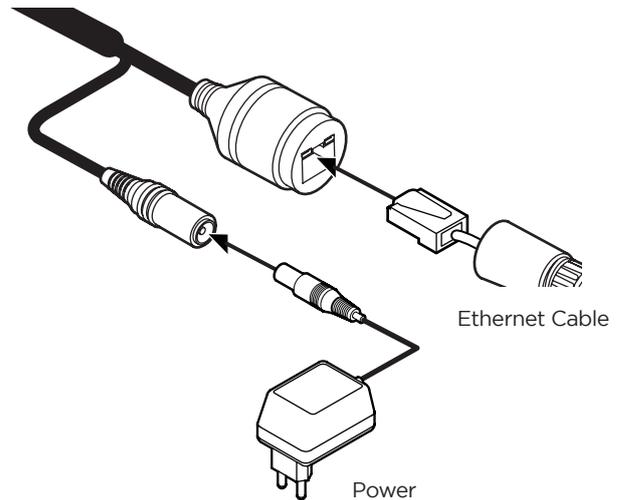

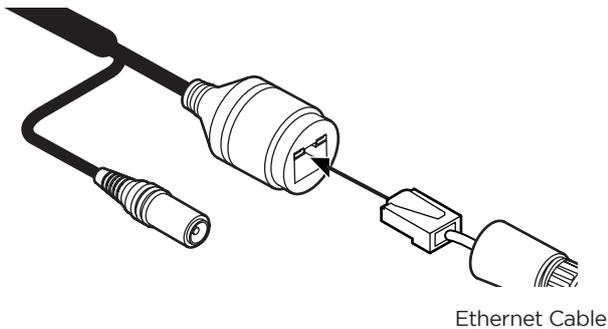

### 1. Using a PoE-Enabled Switch

The Camera is PoE-compliant, allowing transmission of power and data via a single Ethernet cable. PoE eliminates the need for the different cables used to power, record, or control the camera. Follow the illustration below to connect the camera to a PoE-enabled switch using an Ethernet cable.

### 2. Using a Non-PoE Switch

If a PoE-enabled switch is not used, use a power adaptor for power transmission and a non-PoE switch for data transmission. Follow the illustrations below to connect the camera without a PoE-enabled Switch.

Power requirements	Power consumption
DC 12V, PoE IEEE 802.3af Class 3. (Adapter not included)	DC12V: 3.6W PoE: 4W

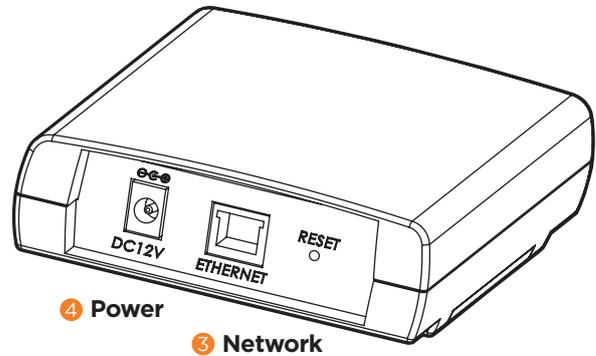

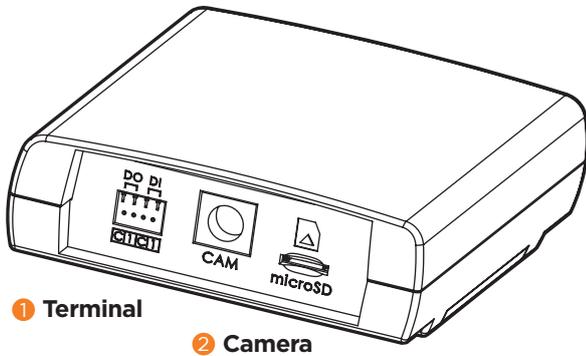

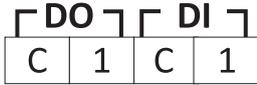

### ❖ Use of Ferrite Core

Install the ferrite core on the LAN cable to reduce high-frequency noise:

- Open the ferrite core by lifting the closing clip.
- Make one loop with the cable through the ferrite core.
- Close the ferrite core to hold the cable loop in place.

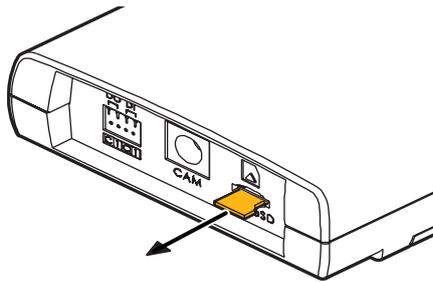

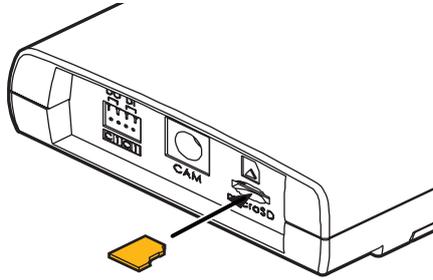

# Installation - Cabling

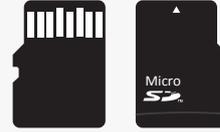

No	Connector	Description				
1	DI/DO connections	DO (Alarm) is used for external devices such as relays and LEDs.				
		C   Ground				
		1   Output: 0 to 24 VDC. Max load: 50mA				
		DI (Sensor) is used for devices such as a PIR and a door/window sensor.				
C	Ground					
		1   Output: 0 to 5 VDC. Max load: 50mA				
2	Camera connection	Connect the camera module's cable to the main unit.				
3	Power	When using a non-PoE switch, connect the camera to an adequate power adapter to power the camera.				
		<table border="1"> <thead> <tr> <th>Power Requirements</th> <th>Power Consumption</th> </tr> </thead> <tbody> <tr> <td>DC 12V, PoE IEEE 802.3af Class 3</td> <td>DC12V: 3.6W PoE: 4W</td> </tr> </tbody> </table>	Power Requirements	Power Consumption	DC 12V, PoE IEEE 802.3af Class 3	DC12V: 3.6W PoE: 4W
		Power Requirements	Power Consumption			
DC 12V, PoE IEEE 802.3af Class 3	DC12V: 3.6W PoE: 4W					
4	Network	Connect the camera to a LAN cable. See page 9.				

# Installation - Managing the SD Memory Card

---

The memory card is an external data storage device that has been developed to offer an entirely new way to record and share video, audio and text data using digital devices.

## ❖ Recommended SD card specification (not included)

- Maximum SD Card size supported: Up to 1TB micro SD / exFAT.
- When inserting the SD card into the card slot, the SD card's contacts should be facing upward, as shown in the diagram.

## Inserting an SD Memory Card

1. To install the camera's SD Card, locate the SD card slot at the front of the main unit.
2. Insert a class 10 SD card into the SD card slot by pressing the SD card into the slot until it clicks into position.

- ❖ Do not insert the SD memory card upside down or by force. It may damage the SD memory card.

## Removing an SD Memory Card

Gently press down on the exposed end of the memory card as shown in the diagram to eject the memory card from the slot.

- ❖ Pressing too hard on the SD memory card can cause the card to shoot out uncontrollably from the slot when released.
- ❖ If you have saved data on the SD memory card, removing the SD memory card before disabling the recording can cause damage to the data stored in the card.

# Network Setup - DW IP Finder™

The screenshot shows the DW IP Finder interface. On the left, there is a sidebar with several controls: 'Select network to scan' (Local Area Connection [192.168.0.188]), 'Filter results' (All), 'Scan network' (Scan Devices), 'Show/hide thumbnail view' (Thumbnail), 'Refresh thumbnail view' (Refresh Thumbnail), 'Bulk IP assignment' (Bulk IP Assignment), 'Bulk password assignment' (Bulk Password Assignment), and 'Firmware upgrade' (FW Upgrade). At the bottom of the sidebar, there is a section for 'Selected camera's username and password' with fields for Username and Password, and a Log In button.

The main area displays a table of discovered cameras. The table has columns for Name, IP Address, Model, MAC Address, Netmask, Gateway, Port, DHCP, Version, Ping Test, IP Conf., and Uptime. Each row includes a thumbnail image of the camera. To the right of the table, there are several callouts pointing to specific elements: 'Thumbnail view', 'Firmware version', 'Camera's uptime', 'Open IP configuration settings', 'Ping camera', 'Camera's network information', 'Camera's name, IP and MAC addresses', and 'Selected camera's username and password'.

Name	IP Address	Model	MAC Address	Netmask	Gateway	Port	DHCP	Version	Ping Test	IP Conf.	Uptime

- To install the DW IP Finder, go to: <http://www.digital-watchdog.com>
- Enter "DW IP Finder" on the search box at the top of the page.
- Go to the "Software" tab on the DW IP Finder page to download the installation file.
- Follow the installation to install the DW IP Finder. Open the DW IP Finder and click 'Scan Devices'. It will scan the selected network for all supported devices and list the results in the table. During the scan, the DW® logo will turn gray.
- When connecting to the camera for the first time, a password must be set. To set up a password for your camera:

- Check the box next to the camera in the IP Finder's search results. You can select multiple cameras.
- Click "Bulk Password Assign" on the left.
- Enter admin/admin for the current username and password. Enter a new username and password to the right.

The 'Bulk Password Assignment' dialog box has two sections: 'Current Account' and 'New Password'. The 'Current Account' section has fields for Username (admin) and Password (admin). The 'New Password' section has fields for New, Confirm, and Hint. A 'Change' button is at the bottom right. Below these sections is a table with columns for Name, MAC Address, IP Address, and Note. The table contains one entry: DWC-M2W4T, 00:0D:F1:21:66:92, 192.168.10.159.

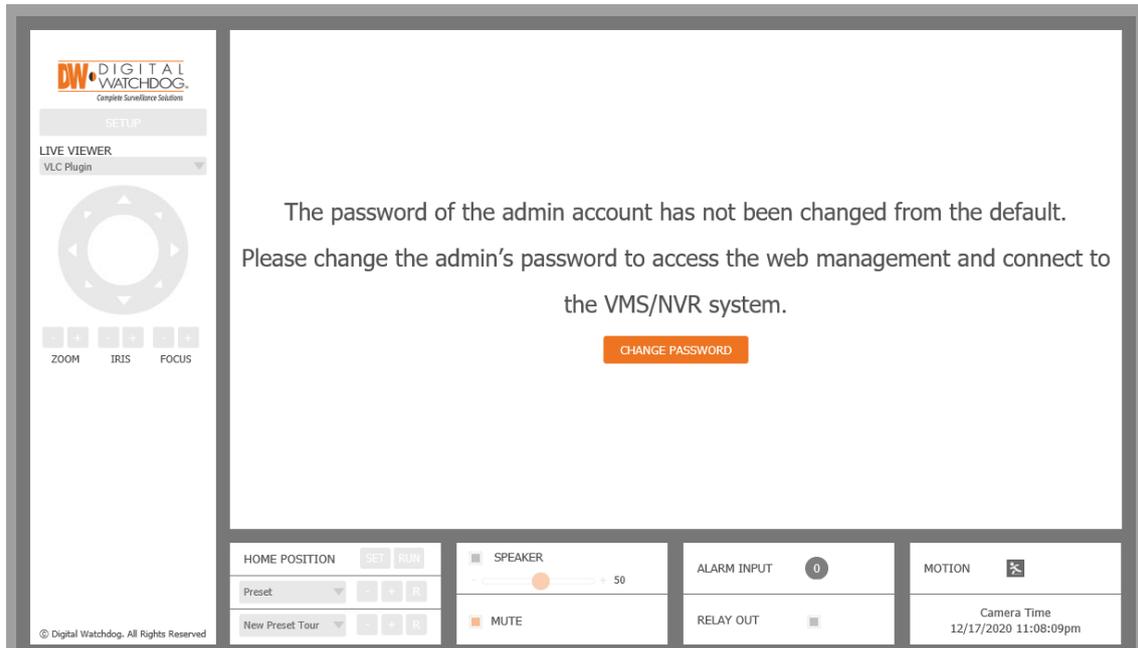

Passwords must have a minimum of 8 characters with at least 4 combinations of uppercase letters, lowercase letters, numbers and special characters. Passwords cannot contain the user ID.

- Click "change" to apply all changes.

- Select a camera from the list by double-clicking on the camera's image or clicking on the 'Click' button under the IP Conf. column. The pop-up window will show the camera's current network settings, allowing admin users to adjust the settings as needed.
- To access the camera's web page, click on the 'View Camera Website' from the IP Config window.
- To save changes made to the camera's setting, enter the username and password of the camera's admin account and click 'Apply'.

The 'DW Camera Settings' dialog box shows configuration options for a camera. Fields include Camera Name (DWC-MD421TR) and MAC Address (00:0D:F1:20:A4:9E). Under 'IP Configuration Mode', 'DHCP' is selected. Other fields include IP Address (192.168.1.101), Netmask (255.255.255.0), Gateway (192.168.1.1), and DNS (192.168.40.1). The 'Ports' section has fields for Web Port (80), Control Port (0), Video Port (0), Audio Transmit (0), and Audio Receive (0). At the bottom, there are fields for Username (admin) and Password (masked with dots). Buttons include 'Restore default camera configuration', 'View Camera Website', 'Apply', 'Reboot', and 'Cancel'.

# Web Viewer Screen - Basic Screen (Default)

**Password change is required at the initial connection in a factory reset state. The web client cannot be fully utilized until a new password has been assigned.**

- 1 You cannot see the image, and the setup button is disabled.
- 2 Change the password with the CHANGE PASSWORD button.

- 3 After changing the password, log in again by pressing the RE-LOGIN button.
  - Internet Explorer: After three failed attempts or the cancel button is clicked, you will experience a login fail.
  - Other Browsers: After the Cancel button is clicked, you will experience a login fail.

**The admin's password has been changed.**

**Please re-login.**

[RE-LOGIN](#)

**Your session has expired and you have been signed out.**

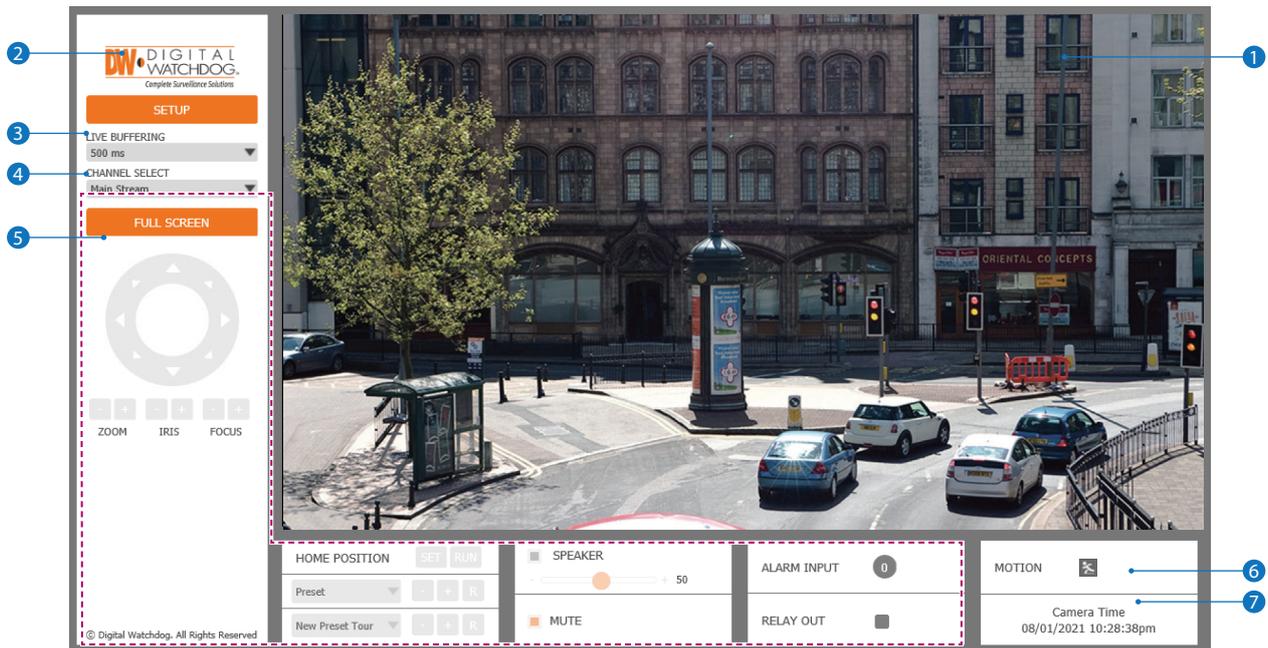

**Please re-login.**

[RE-LOGIN](#)

**✳ Password Hint Page**

- If you need help remembering the password for your user, input the username in the username field and press the hint button. If you added a hint for your password when setting it up, it will appear then.

# Web Viewer Screen - Basic Screen

- ※ The web viewer is optimized with Internet Explorer 10 (or above) and Mozilla Firefox.
- ※ “If VLC is not installed or the VLC plugin is not supported (Chrome), ‘Live Buffering’ and ‘Channel Select’ (subjects 3 and 4 in the diagram) will display as ‘Live Viewer’. If so, select HTML5 (MJPEG) from the Live Viewer menu to view the video.

- 1 Live video display. This is the region for the live video stream from the camera.
- 2 Setup a popup button. Click it to open the Setup page to setup details of the IP camera like Video, Network, Events, System, etc. See the section ‘Setup’.
- 3 When the image is distorted due to a bad network connection, the stored image frames will display live images, depending on the set buffer time.
  - ※ Users will see the delayed images based on the set delay time.
- 4 Channel Select button. Select a stream produced from the camera between Stream 1 ~ 3 to display it in the live view screen.
  - ※ Refer the ‘Setup > Video & Audio > Video’ to setup the Video Stream.
- 5 Below “Menu” is supported per model.
 

---

**PTZ Control** - This camera model does not support zoom and focus.

---

**Preset** - Not supported.

---

**Speaker Control** - Enable/disable the audio stream from the camera and adjust the volume accordingly.

---

**Alarm Input** - If an alarm is triggered, the corresponding input number will be changed from dark gray to red.

---

**Relay Out** - Using this checkbox, read the relay output status and set or reset it manually.

---
- 6 **Motion** - Shows the motion event status.
  - ※ Event Alert Icon (  ) appears if ‘Motion Detection’ is activated.
- 7 **Camera Time** - Display the camera time.

# Setup - Video & Audio Setup

## Video Configuration

**VIDEO CONFIGURATION**

Stream	Codec	Description
1	H.264	channel1
2	H.264	channel2
3	M-JPEG	channel3

**Codec**

Codec: H.264

Description: channel1

Resolution: 1920x1080

Frame Rate(FPS): 30

GOP: 30 [ 1 ~ 120 ]

Profile: High

Bitrate Mode: CBR

Target Bitrate: 5120 [ 100Kbps ~ 10Mbps ]

Quality: 5 [ 1 ~ 10 ]

Smart Bitrate Control: Off

Extension Option: Off

APPLY

**1 Live Video Channel Setup** - The video can be configured to various settings with a combination of codec and resolution. The camera performance should be considered when setting multiple channels, as the performance of the camera will be affected.

⚠ H.265 (HEVC) codec with a higher bitrate may cause unstable live streaming or reload the webpage.

**2 Codec** - Choose the video codec. Depending on the selected codec, the subcategories may be changed accordingly.

**3 Description** - Input the additional description of the selected channel. Max. 30 alphanumeric characters may be used, including spaces.

**4 Resolution** - Select video resolution.

⚠ Available Frame Rate may differ even if the same codecs are in use.

<Resolution of Video Format>

	1080p/i	720p/i	SVGA	VGA	4CIF	CIF
NTSC	1920 x 1080	1280 x 720	800 x 600	640 x 480	704 x 576 704 x 480	352 x 288 352 x 240

**5 Frame Rate** - Select the maximum Frame Rate.

⚠ Available Frame Rate can be different although the same codecs were set up.

APPLY

- 6 **GOP (Group of Pictures) Size** - Set up the number of frames (P-frame) which contain only changed information based on the basic frame (I-frame). Regarding videos with lots of movement, if you set the GOP size bigger, only the number of P-frames is bigger. As a result, the video resolution will be low but 'File size' and 'Bit-rate can be decreased.

⚙️ **GOP (Group of Pictures) Size** -

I-frame and P-frame creation for MPEG4, H.264, and H.265 (HEVC) video compression. 'I-frame', also known as 'key-frame', refers to the complete image data for a specific video frame. 'P-frame' refers to the changes in the image in comparison to the previous video frame. As a result, the GOP consists of one I-frame and several P-frames. For improved video quality, use a lower number of P-frames for this setting.

- 7 **Profile** - The profile defines the subset of bitstream features in H.264, H.265 (HEVC) stream, including color reproduction and additional video compression.

⚙️ H.264: Main, High / H.265 (HEVC): Main

---

**Main** - An intermediate profile with a medium compression ratio. Supports I-frames, P-frames, and B-frames.

**High** - A complex profile with a high compression ratio. Supports I-frames, P-frames, and B-frames.

- 8 **Bitrate Mode** - Select the bit rate control scheme of video compression from CBR (Constant Bit Rate) or VBR (Variable Bit Rate).

---

**CBR** - To guarantee the designated constant bit rate, the quality of the video is controlled in this mode. Therefore, the quality of the video is likely to be varying when network traffic is changing.

---

**VBR** - To guarantee the designated quality, the bit rate of the video stream is changed in this mode. Therefore, the frame rate of the video is likely to be varying when network traffic is changing.

---

⚙️ This category will not appear if you select the codec.

# Setup - Video & Audio Setup

## Video Configuration

---

Stream	Codec	Description
1	H.264	channel1
2	H.264	channel2
3	M-JPEG	channel3

<b>Codec</b>	
Codec	H.264
Description	channel1
Resolution	1920x1080
Frame Rate(FPS)	30
GOP	30 [ 1 ~ 120 ]
Profile	High
Bitrate Mode	CBR
Target Bitrate	5120 [ 100Kbps ~ 10Mbps ]
Quality	5 [ 1 ~ 10 ]
Smart Bitrate Control	Off
Extension Option	Off

APPLY

9 **Target Bitrate** - If Bitrate Control is set to be CBR, you can set the Target Bitrate.

10 **Quality** - For VBR control mode, The Target Quality of the video can be setup.

11 **Smart Core** - Off / Smart.RC

12 **Extension Option**

---

**Off** - You cannot use the Extension Option.

---

**SVC-T On** - The H.264, H.265 (HEVC) SVC (Scalable Video Coding) is a video compression algorithm that enables effective and efficient transmission of video files over low bandwidth networks.

## OSD Configuration

---

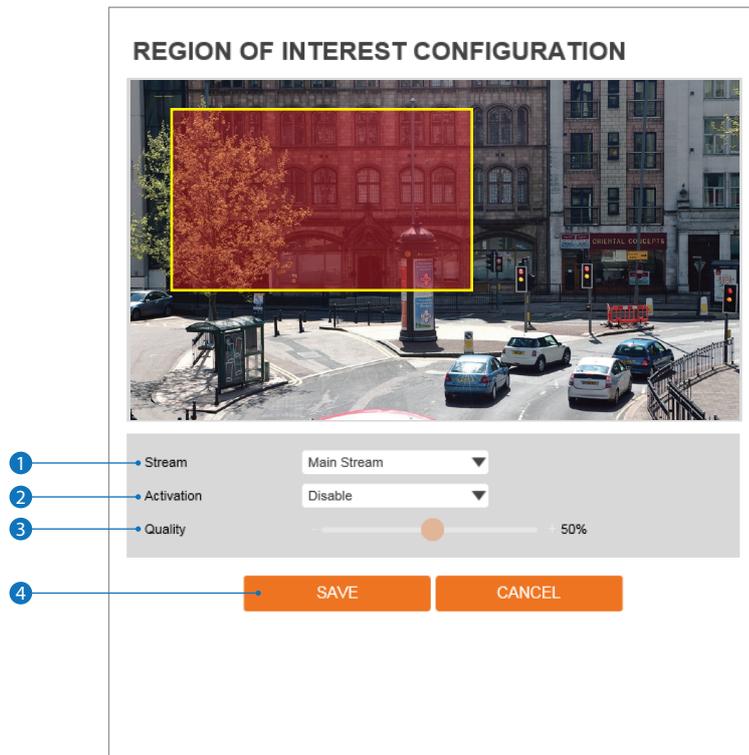

The screenshot shows the 'ON SCREEN DISPLAY(OSD) CONFIGURATION' window. It is divided into two main sections: 'Date & Time' and 'User Text'. Each section has a radio button for 'Off' (selected) and 'On'. Below each section are two input fields for 'Position X' and 'Position Y', both with a range of [0 ~ 100]. The 'User Text' section also has a text input field. At the bottom center is an orange 'APPLY' button. Three blue callout boxes with numbers 1, 2, and 3 point to the 'Date & Time' section, the 'User Text' section, and the 'APPLY' button respectively.

- 1 **Date / Time** - Display the current time.
- 2 **User Text** - Output the TEXT entered by the user. Support a maximum of 30 characters.
- 3 Click 'Apply' to save all settings.

# Setup - Video & Audio Setup

## Region of Interest Configuration

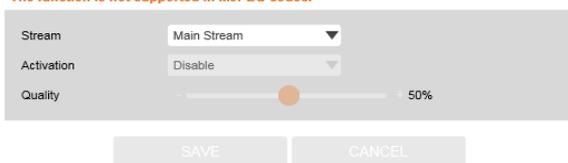

---

The region of interest function gives a more efficient picture quality for the indicated area to improve the qualities of movement in the scene without compromising the bandwidth.

- 1 **Stream** - Select the Stream.
  - ☒ Currently supports only H.264, H.265 (HEVC).
  - ☒ The function is not supported in the MJPEG codec.

The function is not supported in MJPEG codec.

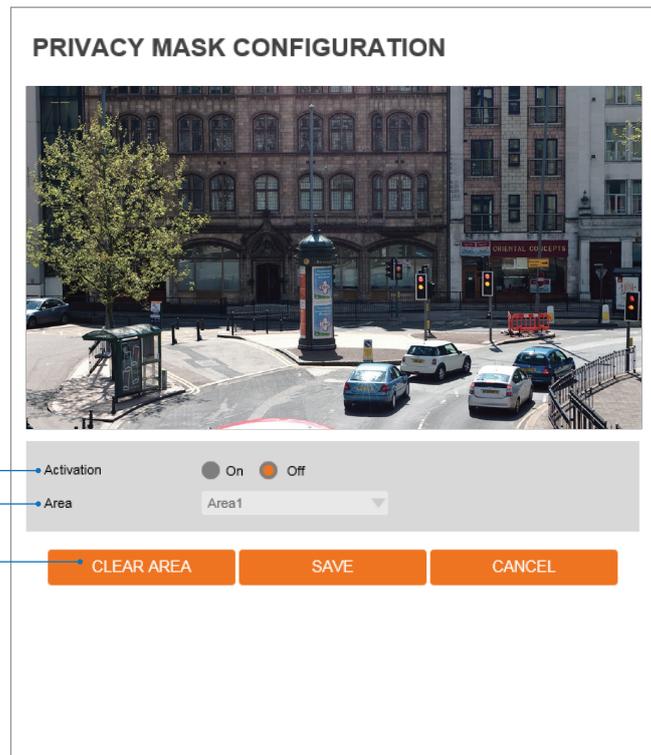

- 2 **Activation** - Enable or disable the region of interest function.
- 3 **Quality** - Set the quality of the set area.
- 4 Click 'Save' to save all settings.
  - ☒ Click 'Cancel' to return to the previous setting.

# Setup - Video & Audio Setup

## Privacy Mask Configuration

---

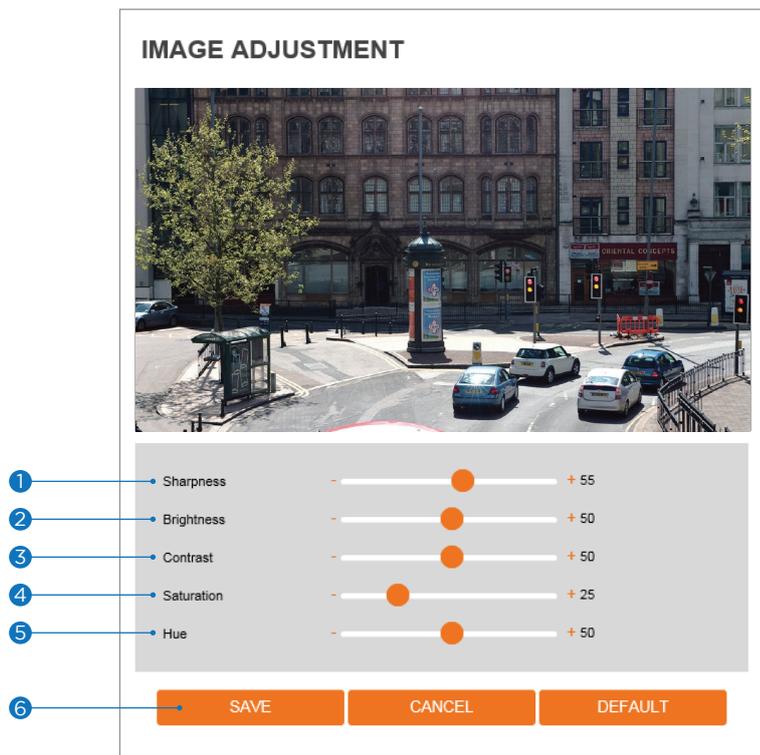

**Use this function to mask areas that you want to hide on-screen to protect privacy.**

- 1 **Activation** - Enable or disable the privacy mask function.
- 2 **Area** - Select Area1 ~ Area16, then draw the privacy mask in the video display.
- 3 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Clear Area' to delete the selected Area1~Area16.

# Setup - Camera Setup

## Camera Image Adjustment

---

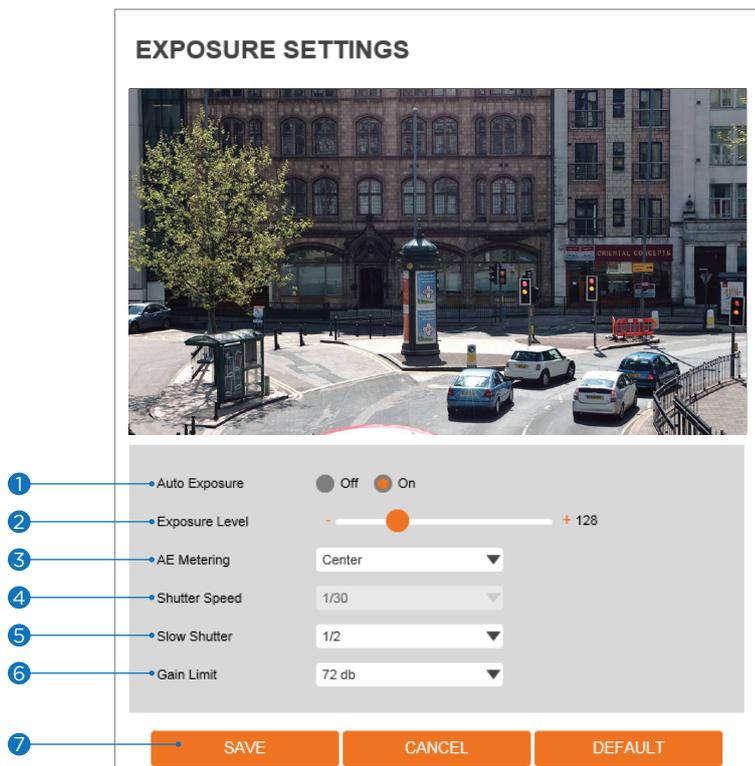

- 1 **Sharpness** - The higher the number, the sharper the lines in the image will appear.
- 2 **Brightness** - The higher the number, the brighter the image will appear.
- 3 **Contrast** - The higher the number, the stronger the contrast between colors in the image will appear.
- 4 **Saturation** - The higher the number, the more saturated the colors in the image will appear.
- 5 **Hue** - The higher the number, the stronger the hue in the image will appear.
- 6 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Camera Setup

## Camera Exposure Settings

---

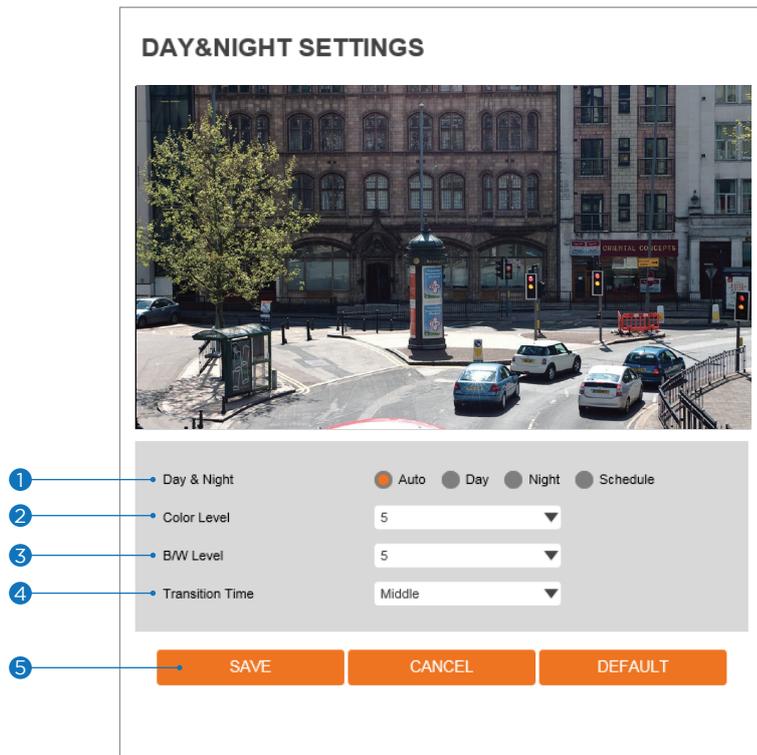

- 1 **Auto Exposure** - Automatic exposure (AE) automatically sets the aperture or shutter speed, based on the external lighting conditions for the photo.
- 2 **Exposure Level** - The higher the number, the brighter the image will appear.
- 3 **AE metering** - AE metering mode refers to how a camera determines the exposure.
- 4 **Shutter Speed** - If this speed is faster, the moving object can be photographed without the ghost effect. However, the picture can be dark if the lighting is insufficient.
- 5 **Slow Shutter Level** - Slow shutter Level lets you adjust the amount of light striking the sensor and essentially determines when the video sensor sends out its batch of data for processing.
- 6 **Gain Limit** - Adjusts image gain. The lower the value, the darker the image will appear.
- 7 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Camera Setup

## Camera Day & Night Settings

---

### 1 Day and Night

- **Auto:** In this mode, the IR cut filter is removed automatically depending on the light condition around.
- **Day:** In this mode, the IR cut filter is applied to the image sensor all the time. Thus, the sensitivity will be reduced in the dark light condition, but better color reproduction performance is obtained.
- **Night:** In this mode, the IR cut filter on the image sensor is removed all the time. The sensitivity will be enhanced in the dark light condition, but the image is black and white.
- **Schedule:** In this mode, Day/Night mode is converted accordance with the scheduled time.

2 **Color Level** - This level determines when the camera will change from Night mode (B/W) to Day mode (color) while set to Auto. The lower that this value is set, the lower the lighting threshold requirement will be for the transition.

3 **B/W Level** - This level determines when the camera will change from Day mode (color) to Night mode (B/W) while set to Auto. The lower that this value is set, the lower the lighting threshold requirement will be for the transition.

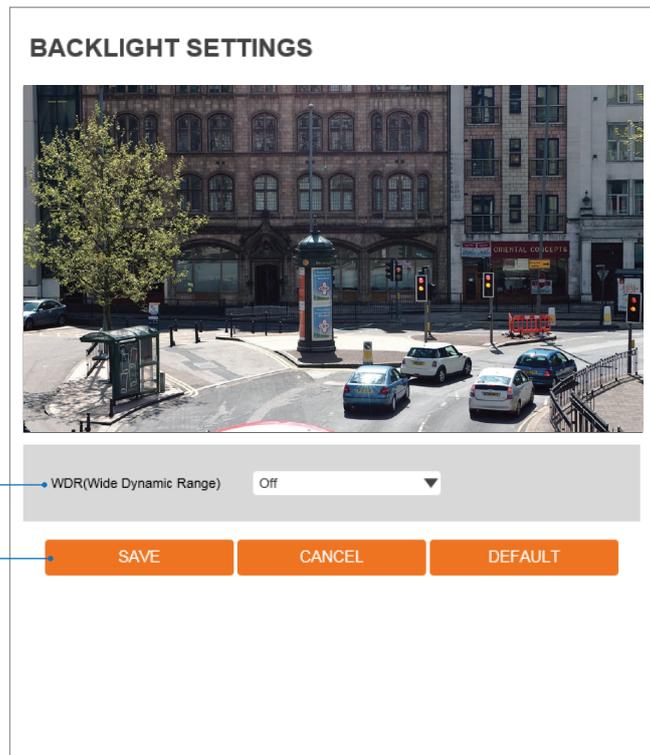

4 **Transition Time** - If it is set to Auto, to determine the rate at which Day/Night is converted. If it is set to schedule mode, Set the time that Day/Night is converted.

- 5 Click 'Save' to save the current settings.
- ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Camera Setup

## Camera Backlight Settings

---

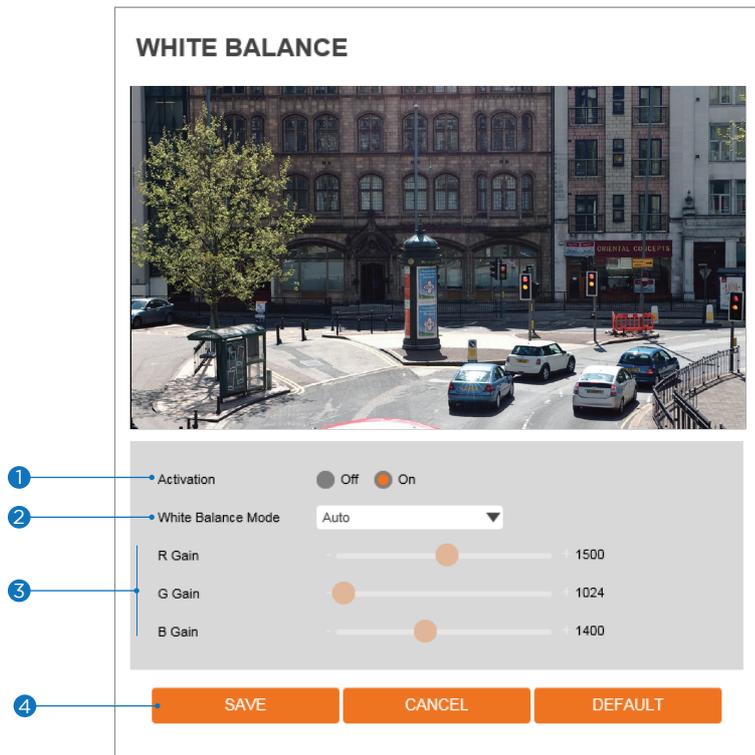

**This feature is used when lighting conditions may cause detail loss in the camera's view due to high contrast.**

- 1 **WDR (Wide Dynamic Range)** - Enable or disable the feature.
- 2 Click 'Save' to save all changes.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to change the settings back to their factory defaults.

# Setup - Camera Setup

## Camera White Balance

---

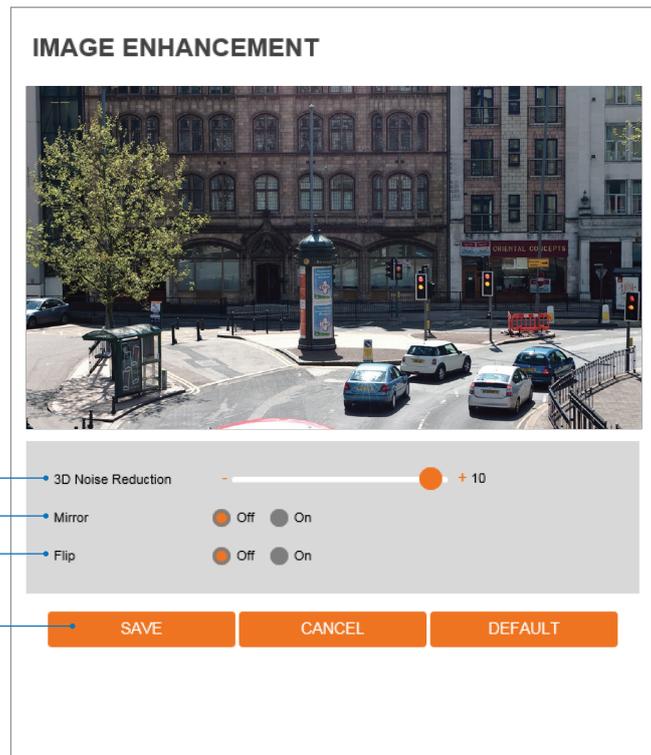

- 1 **Activation** - Enable or disable the White Balance function
- 2 **White Balance Mode** - Select White Balance depending on the lighting conditions.
- 3 **RGB Gain** - The R/G/B gain can be set only when the White Balance Mode is set to Manual.
- 4 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Camera Setup

## Camera Image Enhancement

---

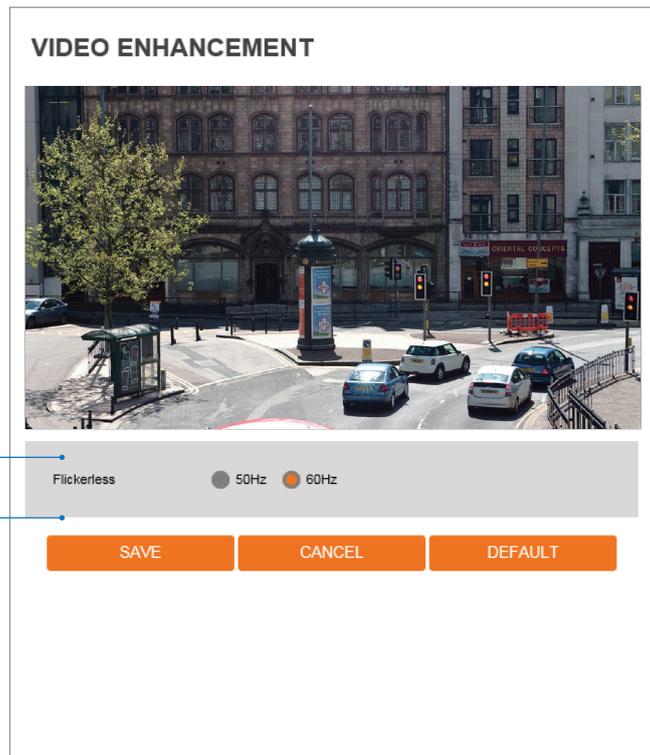

- 1 **3D Noise Reduction** - Reduce digital noise in low-light conditions, improving video quality.
- 2 **Mirror** - Reverse the video horizontally.
- 3 **Flip** - Reverse the video vertically.
- 4 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Camera Setup

## Video Enhancement

---

- 1 **Flicker** - In environmental situations where the camera's image appears to flicker, change the Hz values to improve the camera's image.
- 2 Click 'Save' to save the current settings.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ Click 'Default' to settings to the factory defaults.

# Setup - Network Setup

## Network Status

---

NETWORK STATUS	
MAC Address	00:20:21:03:12:03
IP Address	192.168.1.69
Subnet Mask	255.255.0.0
Default Gateway	192.168.1.1
Preferred DNS Server	192.168.1.1
Alternate DNS Server	
HTTP Port	80
HTTPS Port	443
RTSP Port	554

**This menu displays the camera's current network settings. To make any changes to the settings, you must go to the appropriate network settings tab.**

# Setup - Network Setup

## Network Settings

---

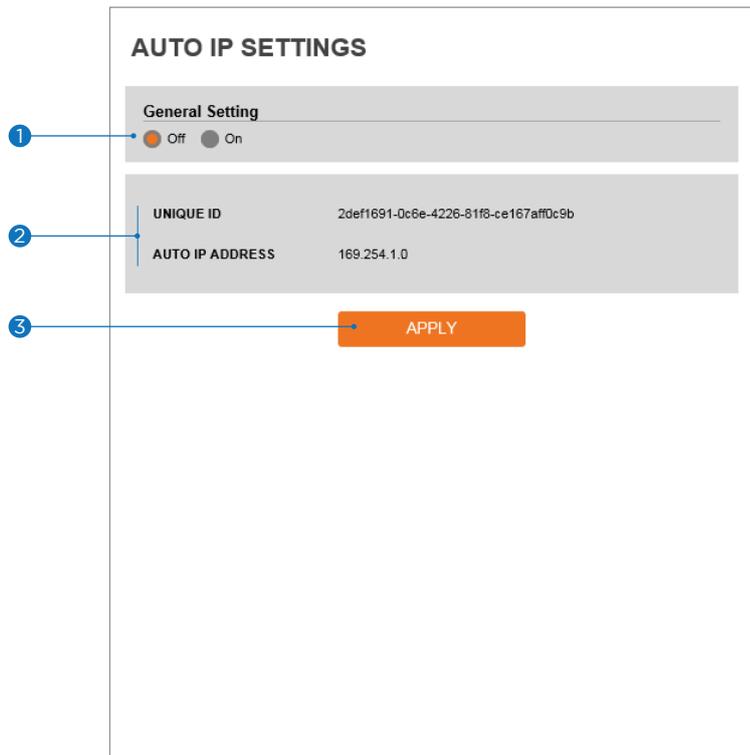

The screenshot shows the 'NETWORK SETTINGS' configuration page. At the top, the 'Host Name' is set to 'IPNC'. Below this is the 'Network Type' section with radio buttons for 'Static' (selected) and 'Dynamic'. The 'IP setup' section contains input fields for 'IP Address' (192.168.1.69), 'Subnet Mask' (255.255.0.0), 'Default Gateway' (192.168.1.1), 'Preferred DNS Server' (192.168.1.1), and 'Alternate DNS Server'. The 'Port Setup' section has input fields for 'HTTP Port' (80), 'HTTPS Port' (443), and 'RTSP Port' (554), each with a default range in brackets. At the bottom is an orange 'APPLY' button. Numbered callouts 1 through 10 point to these specific elements.

- 1 **Network Type** - Define the network IP address type. Select Static Mode for a fixed IP or Dynamic Mode for a dynamic IP address.  
If you select Static Mode, enter the camera's IP Address, Subnet Mask, Gateway, DNS Server, and all ports.  
If you select Dynamic Mode, the IP address will be assigned automatically by the DHCP network requirements.  
If you click 'Apply', the system will reboot and you will have to reconnect the camera using the new IP address.
  - 2 **IP Address** - A unique string of numbers, divided into four octets (ranging from 0-255), is used to identify the device over a network.
  - 3 **Subnet Mask** - Determines the range of IP address options within the network.
  - 4 **Default Gateway** - IP address of the forwarding host within the network; the IP address of the router that is most commonly used.
  - 5 **Preferred DNS Server** - Address of the decentralized system used to translate alphabetic names into IP addresses.
  - 6 **Alternate DNS Server** - Secondary address of the decentralized system used to translate alphabetic names into IP addresses.
  - 7 **HTTP Port** - The HTTP port can be set to the default 80 port or any value between 1025 to 60000.
  - 8 **HTTPS Port** - The HTTPS port can be set to the default 443 port or any value between 1025 to 60000.
  - 9 **RTSP Port** - The RTSP port can be set to the default 554 port or any value between 1025 to 60000.
  - 10 Click 'Apply' to save all settings.
- ⊠ If the network type is dynamic, the IP address is changed in the following cases. In these cases, the IP address needs to be searched again, and the camera needs to be reconnected:
- When the camera's power is switched off and on.
  - After firmware update, or when the camera is reset to its default settings and reboot.

# Setup - Network Setup

## Auto IP Settings

---

- 1 **General Setting** - Enable or disable the Auto IP Settings.
- 2 **Auto IP Settings Information** - Display the camera's Unique ID and Auto IP address.
- 3 Click 'Apply' to save all settings.

# Setup - Network Setup

## ONVIF Settings

---

The screenshot shows the 'ONVIF SETTINGS' interface. It has two main sections: 'Authentication' and 'Discovery mode'. The 'Authentication' section has three radio button options: 'None', 'WS-Usertoken', and 'WS-Usertoken + Digest'. The 'Discovery mode' section has two radio button options: 'Discoverable' and 'Nondiscoverable'. Below these sections is an orange 'APPLY' button. Three numbered callouts (1, 2, and 3) are on the left side of the interface. Callout 1 points to the 'Authentication' section, callout 2 points to the 'Discovery mode' section, and callout 3 points to the 'APPLY' button.

### 1 Authentication

**None:** Allow access to the camera without ONVIF authentication.

**WS - Usertoken:** Allow access to the camera with WS-User Token of ONVIF authentication.

**WS - Usertoken + Digest:** Allow access to the camera with WS-User Token and Digest of ONVIF authentication.

### 2 Discovery Mode - Enable or disable discovery mode.

### 3 Click 'Apply' to save all settings.

# Setup - Network Setup

## UPNP Settings

---

The screenshot shows the 'UPNP SETTINGS' interface. It is divided into two main sections: 'General Setting' and 'Device Information'. In the 'General Setting' section, there are two radio buttons: 'Off' (selected) and 'On'. In the 'Device Information' section, there is a 'FriendlyName' field with the value 'NEBR-SLAH2'. At the bottom right, there is an orange 'APPLY' button. Three numbered callouts (1, 2, and 3) point to the 'Off' radio button, the 'FriendlyName' field, and the 'APPLY' button, respectively.

- 1 **General Setting** - Enable or disable the UPNP function.
- 2 **Friendly Name** - Define the friendly name. Support a maximum of 30 characters and special characters.
  - Do not use: / ~ ! \$ ( ) { } [ ] ; ,
  - Acceptable special characters include; @ . \_ -
- 3 Click 'Apply' to save all settings.

# Setup - Network Setup

## DDNS Settings

---

❶ **DDNS Disable** - If it is selected, the DDNS service does not work.

❷ **Public DDNS** - To use public DDNS service, select a site address listed on the list. After filling out the Host Name of the site the setup is completed by entering the username and password registered in that DDNS site.

DDNS Provider	Site Address
DynDNS	www.dyndns.com
No-IP	www.no-ip.com

⚠ If you setup DDNS properly, the IP address of your camera will be updated automatically whenever the IP address is changed or the system is rebooted.

⚠ If IP updating to the DDNS site is failed, the camera will keep retrying in 1min. interval.

❸ Click 'Apply' to save all settings.

# Setup - Network Setup

## FTP Settings

---

**FTP SETTINGS**

**General Setting**

Off  On

**Server information**

FTP Server Address

FTP Upload Path

FTP Port

User ID

Password

**APPLY**

To transfer/save the image to the relevant sites through FTP, then FTP needs to be setup.

- 1 **General Setting** - Enable or disable the FTP function.
- 2 **FTP Server Address** - Define FTP Server IP Address. If the IP Address form is incorrect, a message box will be shown to try again.
- 3 **FTP Upload Path** - Define a path in FTP server to store video. For the path name, English Alphabet, numbers and special characters ( / ~ ! @ \$ ^ ( ) \_ - { } [ ] ; , ) can be used.
- 4 **FTP Port** - Define the FTP Server Port. If the port is not appropriate, it is impossible to access to FTP Server.
- 5 **User ID** - Define User ID to access the FTP Server. Fill out the correct User ID registered in the FTP Server.
- 6 **Password** - Define Password to access the FTP Server. Fill out the correct Password registered in the FTP Server.
- 7 Click 'Apply' to save all settings.  
☒ Refer to the above image for example.

# Setup - Network Setup

## SMTP Settings

---

The screenshot shows the 'SMTP SETTINGS' configuration page. It is divided into three main sections: 'General Setting', 'Account information', and 'Mail Contents'.  
1. 'General Setting' has a radio button for 'Off' (selected) and 'On'.  
2. 'Account information' has a 'Mode' section with radio buttons for 'PLAIN' (selected) and 'SSL/TLS'.  
3. Below 'Mode' are input fields for 'SMTP Server Address', 'PORT' (with '25' pre-filled), 'User ID', 'Password', 'E-Mail Sender', and 'E-Mail Receiver'.  
4. 'Mail Contents' has a 'Title' input field and a 'Message' text area with a scroll bar.  
5. Below the 'Message' field is a checkbox labeled 'Contains detailed event information'.  
6. At the bottom are two buttons: 'TEST' and 'APPLY'.

To send/save the image to the relevant sites by Email, SMTP needs to be setup.

- 1 **General Setting** - Enable or disable the SMTP function.
- 2 **Mode** - Select the security mode of SMTP from Plain or SSL / TLS. After checking the account setup of your SMTP Server, you may select one.
- 3 **SMTP Server Address** - Define the SMTP Server Address. If the IP Address form is incorrect, a message box will be shown to try again.
- 4 **Port** - Define the Port used in the Plain or SSL / TLS security mode in the above.
- 5 **User ID** - Define the User ID to access the SMTP Server. Fill out the correct User ID registered in the SMTP Server.
- 6 **Password** - Define the Password to access the SMTP Server. Fill out the correct Password registered in the SMTP Server.
- 7 **E-Mail Sender** - Define the e-mail address of the E-Mail Sender. It will be displayed as the sender when the camera sends an E-mail.
- 8 **E-Mail Receiver** - Define the e-mail address of the E-Mail Receiver. It will be displayed as the Receiver when the camera sends an E-mail.
- 9 **Title** - Define the title of the E-Mail when the camera sends an E-mail.  
⚠ The title of the Email is limited to 40 characters including the spaces.
- 10 **Message** - Define the contents of E-Mail when the camera sends an E-mail. The message of the E-mail is limited to 40 characters including the spaces.
- 11 Click 'TEST' to send a test message 'APPLY' to save all settings.

# Setup - Network Setup

## SNMP Settings

---

The screenshot shows the 'SNMP SETTINGS' configuration page. It is divided into two main sections: 'SNMP v1/v2c' and 'SNMP v3'.  
1. In the 'SNMP v1/v2c' section, there are radio buttons for 'SNMPv1' and 'SNMPv2c', both currently set to 'Off'. Below these are text input fields for 'Read Community' (containing 'public') and 'Write Community' (containing 'private'). There is also a radio button for 'SnmptTrap' (set to 'Off') and a text input for 'TrapAddress' (containing '0.0.0.0').  
2. The 'SNMP v3' section has a dropdown menu for 'Mode' set to 'Read'. Below it is an 'Activation' radio button set to 'Off'. There are text input fields for 'Read Name' (containing 'root'), 'Authentication Password', and 'Private-Key Password'. There are also dropdown menus for 'Security Level' (set to 'no auth, no priv'), 'Authentication Algorithm' (set to 'MD5'), and 'Private-Key Algorithm' (set to 'DES').  
3. At the bottom right of the form is an orange 'APPLY' button.

1 **SNMPv1/SNMPv2** - Select the SNMPv1/SNMPv2 option and type the names of Read and Write communities.

**SNMP trap can be used to check periodically for operational thresholds or failures that are defined in the MIB.**

2 **SNMP Trap** - Enable or disable the SNMP trap.

**SNMPv3 contains cryptographic security, a higher security level, which allows you to set the Authentication password and the Encryption password.**

3 **Mode** - Select either Read or Read/Write mode.

4 **Activation** - Select mode to enable or disable.

5 **Read/Write name** - Define Read name and Write name.

6 **Security Level** - Select one of no auth, no priv/auth, priv.

7 **Authentication Algorithm** - Select MD5 or SHA as the authentication method.

8 **Authentication Password** - The Authentication Password is encryption for authentication and is between 8 to 30 digits long.

9 **Private-Key Algorithm** - Select DES or AES as the encryption algorithm.

10 **Private-Key Password** - Information protection password is a private encryption at least 8 digits and up to 30 digits long.

11 Click 'Apply' to save all settings.

# Setup - Network Setup

## HTTP Action

---

The screenshot shows the 'HTTP ACTION' configuration page. It is divided into three main sections: 'General Setting', 'Account information', and 'Message'. The 'General Setting' section has a radio button for 'Off' (selected) and 'On'. The 'Account information' section contains input fields for 'Description', 'HTTP Action Server', 'PORT' (with '80' pre-filled), 'User ID', and 'Password'. The 'Message' section has a large text area for the message content. At the bottom, there is an orange 'APPLY' button. Six numbered callouts (1-6) point to the 'General Setting' radio button, the 'Description' field, the 'HTTP Action Server' field, the 'Message' text area, the 'APPLY' button, and the bottom of the form respectively.

- 1 General Setting** - Enable or disable the camera to send out an HTTP action when an event occurs. When enabled, the camera can notify a monitoring software using HTTP protocol.
- 2 Account information** - Set the RTSP time out.  
Description: Enter a short description to be  
HTTP Action Server: Enter the HTTP address of the receiving server. This is the server that will receive the HTTP action notification from the camera.  
PORT: Enter the port number for the receiving server.  
User ID: Enter the user ID information for the receiving server.  
Password: Enter the password information for the receiving server.
- 3 Message** - Enter the default message that will be included with the alert.
- 5** Click 'Apply' to make the above setting effective.  
⚙️ Click this button when completing the setup each channel.

# Setup - Network Setup

## RTSP Information

---

The screenshot shows the 'RTSP INFORMATION' configuration page. It is divided into several sections: 'RTSP Global Setting' with a 'Target Stream' dropdown set to 'Main Stream'; 'Session Timeout' with a 'Time Out' input set to 0 and a checkbox for '[ Default:Off, 30~120 ]'; 'QoS Setting' with a 'DSCP' input set to 0 and a range of '[ 0~255 ]'; and 'Rtp Multicast' with a 'MULTICAST' section containing radio buttons for 'Stop' (selected) and 'Start', and input fields for 'IP' (0.0.0.0), 'PORT' (0, range [1024~60000]), and 'TTL' (0, range [1~255]). Below these is an orange 'APPLY' button. At the bottom is a table with columns 'No', 'Remote IP', 'Port', and 'Type', containing two rows of data. Numbered callouts 1 through 6 point to the 'Target Stream' dropdown, 'Time Out' input, 'DSCP' input, 'MULTICAST' radio buttons, 'APPLY' button, and the table respectively.

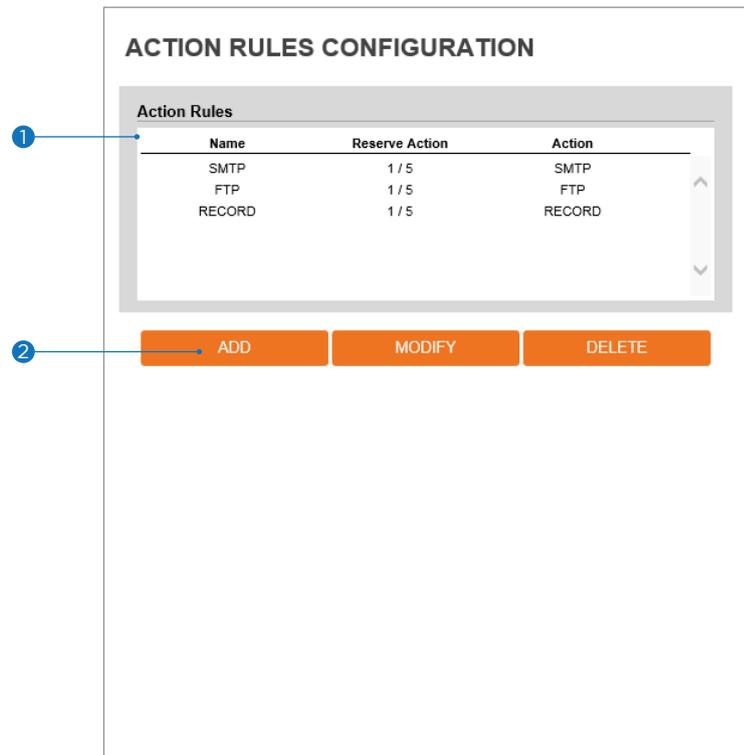

No	Remote IP	Port	Type
1	127.0.0.1	34914	UDP
2	192.168.4.107	64670	UDP

- 1 **Target Stream** - Select the stream you want to set.
- 2 **Time out** - Set the RTSP time out.
  - ⊠ The session is disconnected after the specified time-out.
- 3 **QoS Setting** - Set the quality of service to ensure data transfer performance.
- 4 **RTP Multicast** - Check RTP Multicast Start/Stop. To activate RTP Multicast.
  1. Click the “On” button.
  2. Enter accessible RTP Multicast IP, the port for video stream control, RTP packet TTL.
  3. Click the “Apply” button.
  - ⊠ It is possible to set each RTP Multicast for CH1-3.
- 5 Click ‘Apply’ to save all settings.
  - ⊠ Click this button when completed setup each channel.
- 6 It shows RTSP Connection information.

# Setup - Trigger Action Setup

## Action Rules Configuration

---

- 1 **Action rules List** - It indicates the custom action rule information added to the Action rules list.
- 2 Click 'Add' to add custom action rules.
  - ☒ Click 'Modify' to modify selected items from the action rules list.
  - ☒ Click 'Delete' to delete selected items from the action rules list.

# Setup - Trigger Action Setup

## Action Rules Add / Modify

---

The screenshot shows a form titled "ACTION RULES CONFIGURATION". It has a "General Setting" section with a "Name" field containing "NewAction". Below this are five rows, each with an "Action" label (Action1 to Action5) and a dropdown menu currently set to "NONE". At the bottom are two orange buttons: "SAVE" and "CANCEL". Three blue callout boxes with numbers 1, 2, and 3 point to the Name field, the Action dropdowns, and the SAVE button respectively.

- 1 **Name** - Define the name of the action rules.
  - ⊠ Input text cannot exceed the limit (3-15 characters).
- 2 **Action1 ~ Action5** - Select the action to take If the event occurs.
- 3 Click 'Save' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous menu.

# Setup - Trigger Action Setup

## Image Transfer Configuration

### IMAGE TRANSFER CONFIGURATION

1. Add the FTP/SMTP action in the event rules menu.
2. When an event occurs, the images will be sent to ftp/smtp address .
3. Determine the image transfer speed and the duration of image transfer after/before an event.

#### Pre/Post Alarm Image

Number Of Image	<input type="text" value="2"/>	Image Per Seconds(s) [ 1 ~ 5 ]
Pre-Alarm Duration	<input type="text" value="3"/>	Second(s) [ 1 ~ 5 ]
Post-Alarm Duration	<input type="text" value="3"/>	Second(s) [ 1 ~ 30 ]
Max. Number Of Image	<input type="text" value="30"/>	<input type="checkbox"/> [ Default:Off, 5 ~ 1000 ] (SMTP Only)

- 1 **Pre/Post Alarm Image** - Image Transfer due to event is configured by setting the image transfer rate and Pre/Post alarm duration.

	Descriptions
Number of Images	Define the number of images transferred per second.
Pre-alarm Duration	Define the duration of image transfer before an event.
Post-alarm Duration	Define the duration of image transfer after an event.

- 2 Click 'Apply' to save all settings.

# Setup - Trigger Action Setup Relay Out Configuration

---

The screenshot shows a configuration window titled "RELAYOUT CONFIGURATION". It contains the following elements:

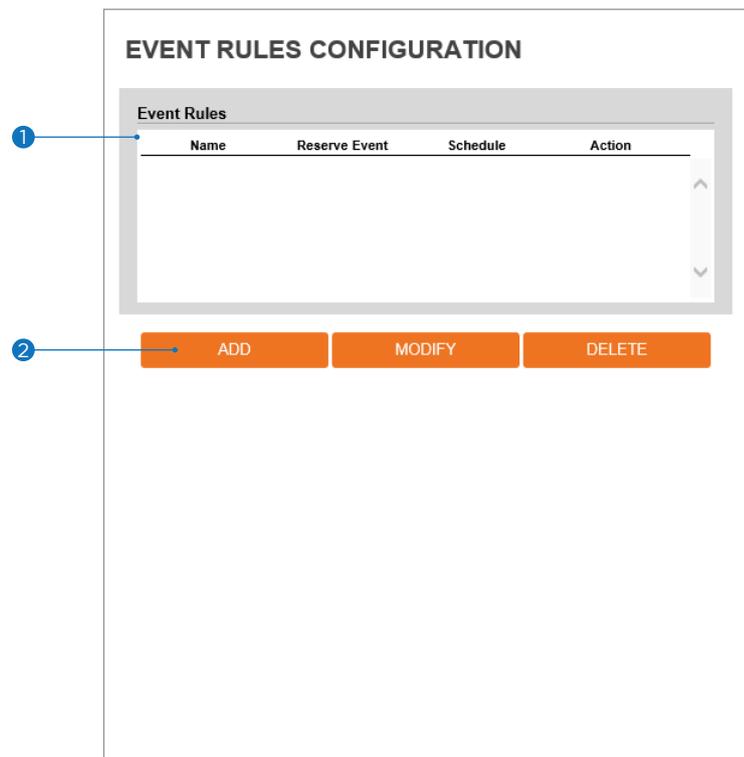

- 1** Relay Output: A dropdown menu showing "01".
- 2** Mode: Two radio buttons, "Monostable" (selected) and "Bistable".
- 3** Idle State: Two radio buttons, "Closed" (selected) and "Open".
- 4** Duration: A text input field containing "1" followed by the label "Second(s) [ 1 ~ 30 ]".
- 5** APPLY: An orange button with the text "APPLY".

- 1 Relay Output** - Select the Relay output.
  - ⚠ The number of relay outputs available depends on the camera model.
- 2 Mode** - Select the monostable/bistable for relay mode.
- 3 Idle State** - Select whether the contact is normally opened or is closed.
- 4 Duration** - Relay out is operated during the setting time.
  - ⚠ In monostable mode, this function must be set up.
- 5** Click 'Apply' to save all changes.

# Setup - Event Setup

## Event Rules Configuration

---

- 1 **Event Rules List** - It indicates the custom Event Rule information added to the Event Rules list.
- 2 Click 'Add' to add custom event rules.
  - ☒ Click 'Modify' to modify selected items from the event rules list.
  - ☒ Click 'Delete' to delete selected items from the event rules list.

# Setup - Event Setup

## Event Rules Configuration

---

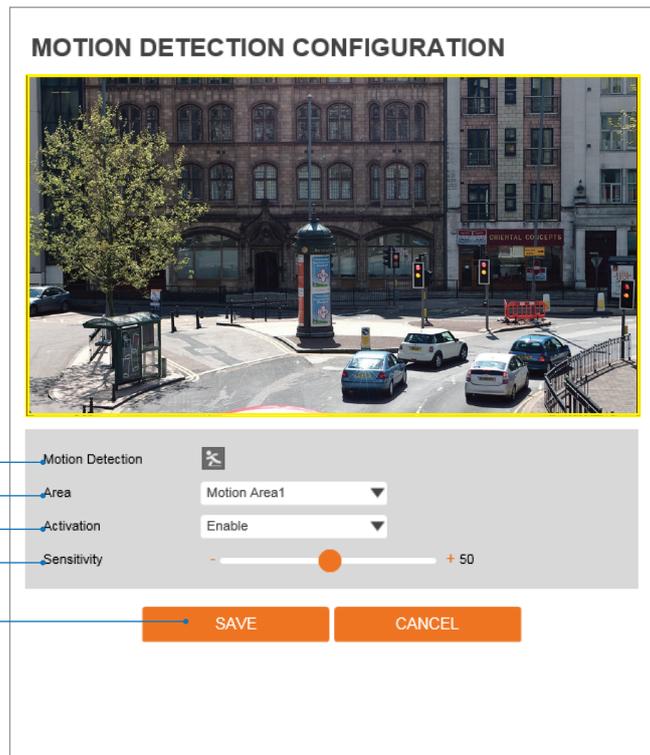

The screenshot shows the 'EVENT RULES CONFIGURATION' interface. It is divided into three main sections: 'General', 'Event Condition', and 'Action'.  
1. In the 'General' section, the 'Name' field contains 'NewRule'.  
2. In the 'Event Condition' section, the 'Event' dropdown menu is set to 'NONE'. Below it, a warning message reads: 'If "System Initialize" is selected, "Recoding" does not work.'  
3. In the 'Action' section, the 'Rules' dropdown menu is set to 'NONE'.  
4. At the bottom, there are two orange buttons: 'SAVE' and 'CANCEL'.  
Numbered callouts (1-7) point to the Name field, the Event dropdown, the warning message, the Rules dropdown, the Save button, the Cancel button, and the bottom of the form respectively.

- 1 **Name** - Enter a name for the new event rule.
- 2 **Event** - Select the event to trigger the rule. Select from motion detection, network disconnection, illegal login detected, temperature critical, sensor detection, or system initialize.
  - ⊠ Click 'Cancel' to return to the previous setting.
  - ⊠ You need at least one event.
- 3 **Rules** - Select the action to take when the rule is active. Select from sending notifications to an SMTP server, an FTPO server, or start recording. Note that "record" action is not available if system initialize is selected as the event.
- 4 Click 'Save' to save the current settings.
  - ⊠ Click 'Cancel' to return to the previous setting.

# Setup - Event Setup

## Motion Detection Configuration

---

- 1 Motion Detection** - It shows the Motion event status.
  - ☒ Event Alert Icon(  ) appears if 'Motion Detection' is activated.
- 2 Area** - Set the motion detected area. Click in the display window to draw the motion area.
  - ☒ You can set up to four areas.
- 3 Activation** - Enable or Disable motion detection function.
- 4 Sensitivity** - Define the sensitivity of motion detection.

If a high value is selected, it will detect very small motion while it becomes relatively insensitive when a low value is selected.
- 5** Click 'Save' to save all settings.
  - ☒ Click 'Cancel' to return to the previous setting.

# Setup - Event Setup Temperature

---

The screenshot shows a web interface titled "TEMPERATURE" with a "General Setting" section. The settings are as follows:

Field	Value	Range
Mode	Fahrenheit	
Threshold	150	[ 122 ~ 212 ]
TEMPERATURE	102 °F	

An orange "APPLY" button is located at the bottom right of the settings area. Four numbered callouts (1-4) point to the Mode dropdown, the Threshold input field, the current Temperature value, and the APPLY button, respectively.

- 1 **Mode** - Select Fahrenheit or Celsius.
- 2 **Threshold** - Define the temperature at which the event trigger occurs.
- 3 **Temperature** - It indicates the current temperature of the IP camera.
- 4 Click 'Apply' to save all settings.

# Setup - Event Setup

## Alarm Configuration

---

**ALARM CONFIGURATION**

**Input Device Setup**

OFF  A Normal Open Contact (NO)  A Normal Closed Contact (NC)

APPLY

- 1 **Input Device Setup** - Select input device type from OFF / N.O. / N.C.

	Operation
OFF	Ignore this input sensor.
NO	The contact is normally open and closed when activated.
NC	The contact is normally closed and open when activated.

- 2 Click 'Apply' to save all changes.

# Setup - Record Setup

## Record Management

---

The screenshot shows the 'RECORD MANAGEMENT' interface. It is divided into two main sections: 'Record Global Setting' and 'RECORDING LIST'. The 'Record Global Setting' section contains a 'Target Stream' dropdown menu currently set to 'NONE'. Below this is an orange 'SAVE' button. The 'RECORDING LIST' section contains a table with the following data:

Name	Enabled	File Type	Storage	Continuous
RECORD0	X	MP4	STORAGE1	Off
RECORD1	X	MP4	STORAGE1	Off

Below the table is an orange 'MODIFY' button. Four numbered callouts (1-4) point to the 'Target Stream' dropdown, the 'SAVE' button, the 'RECORDING LIST' table, and the 'MODIFY' button respectively.

- 1 **Target Stream** - Select the channel you want to record video.
- 2 Click 'Save' to save the current settings.
- 3 **Recording List** - Display the information about the recording settings.
- 4 Click 'Modify' to modify the selected item in the recording list.

# Setup - Record Setup

## Record Configuration

---

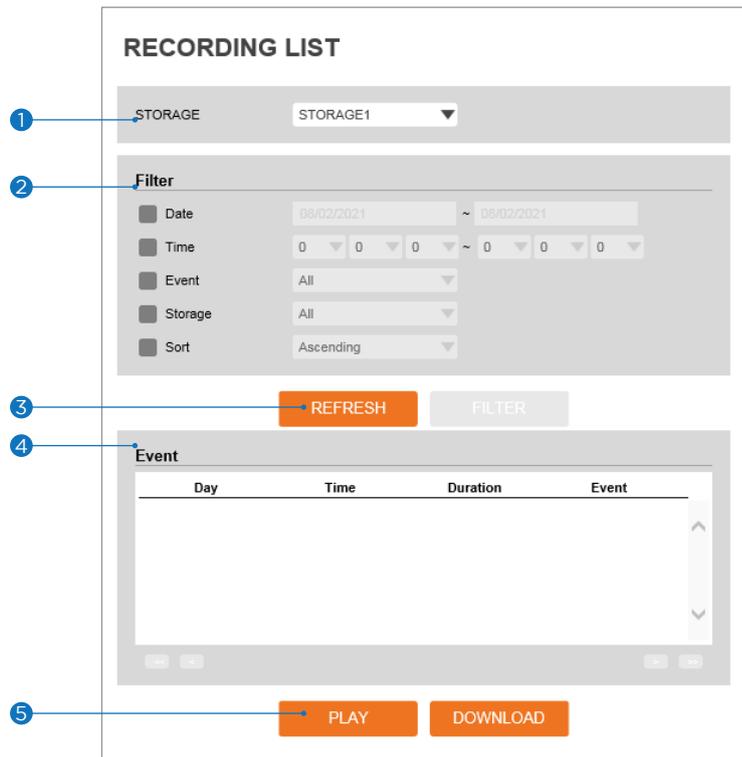

The screenshot shows a 'RECORD MANAGEMENT' window with a 'Record Settings' section. The settings are as follows:

- 1. Enabled: Radio buttons for Off (selected) and On.
- 2. Storage Device: Dropdown menu showing 'SDCard 1'.
- 3. File Type: Dropdown menu showing 'MP4'.
- 4. Storage: Text input field showing 'SDCard'.
- 5. Continuous: Radio buttons for Off (selected) and On.
- 6. Pre Duration: Text input field showing '5' with a range of '[ 0 ~ 5 ]'.
- 7. Post Duration: Text input field showing '5' with a range of '[ 1 ~ 240 ]'.
- 8. SAVE and CANCEL buttons.

- 1 **Enabled** - Enable or disable this function.
- 2 **Storage Device** - This option shows the SD card currently mounted on the camera.
- 3 **File Type** - Select the recording file type.
  - ⊠ Currently, the camera supports MP4 file type.
- 4 **Storage** - Select the storage type. SD Card (Disabled) selection is not allowed.
- 5 **Continuous** - If continuous mode is enabled, the camera will start recording automatically.
- 6 **Pre Duration** - Define the duration of recording before an event.
- 7 **Post Duration** - Define the duration of image transfer after an event.
- 8 Click 'Save' to save the current settings.
  - ⊠ Click 'Cancel' to return to the previous setting.

# Setup - Record Setup

## Recording List

- 1 **Storage** - Select the Storage from the available options.
- 2 **Filter** - Select the date/time, event, sort, or storage format to filter the recorded video results.
- 3 Click the 'Refresh' button to refresh the search results as needed.
  - ☒ Click 'Filter' to view the filtered recorded video.
- 4 **Recording List** - Display the information of the recorded video.
- 5 Click 'Play' to view the selected item in the list of the recorded video results.
  - ☒ Click 'Download' to download the selected item.
  - When you click 'Download', the following window appears.
  - When downloading, please fill-up the purpose of the file download. The field is limited to 30 characters. (This information will be shown on the Log page with the download time).

Input the purpose of the file download (max: 32 characters)

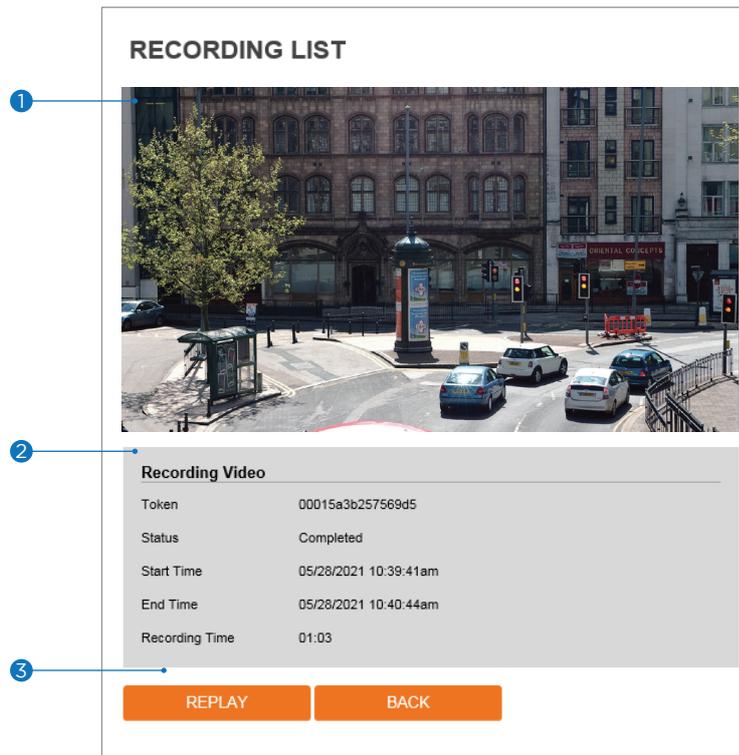

OK

Cancel

- ☒ When playing back recorded MP4 files with H.265 (HEVC) codec, the video may not play due to a performance issue of the VLC plug-in.

# Setup - Record Setup Recording Video

---

- 1 **Recording Video Viewer** - Play the recorded video.
- 2 **Recording Video Information** - Display information about the recorded video.
- 3 Click 'Replay' to view the recorded video again.
  - Click 'Back' to return to the previous menu.

# Setup - Record Setup

## Storage Configuration

---

### STORAGE CONFIGURATION

**Notice**  
1. If SD Card does not automatically mount, you must format for mounting SD card.

#### Storage List

Name	Mounted	Size	Used(%)	Available
SDCard1	O	29.7GB	0%	29.7GB

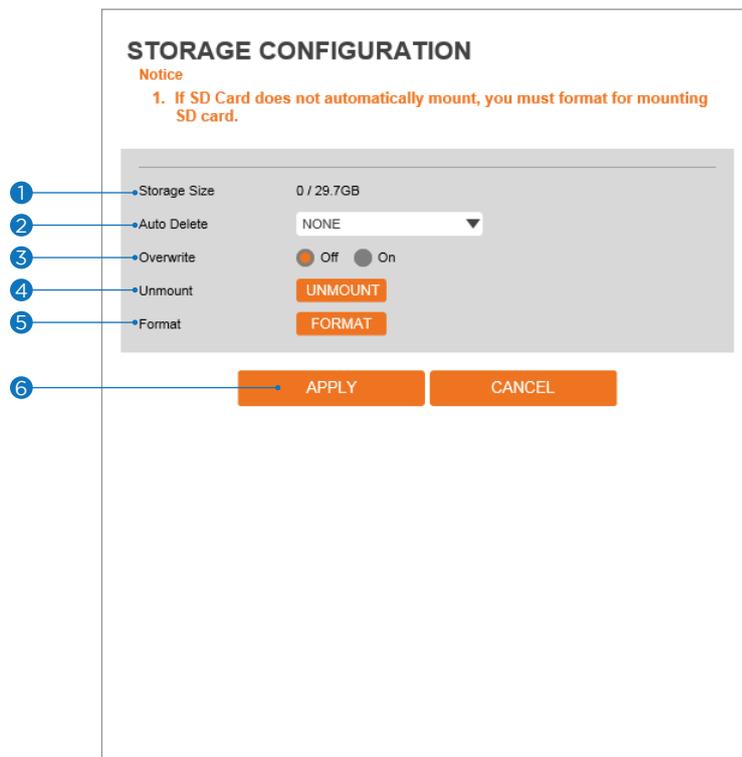

### Display the SD card information mounted on the device.

- ☒ Select an item from the Storage List to configure its related functions.

# Setup - Record Setup

## Storage Configuration

---

- ① **Storage Size** - Total capacity of SD card and the remainder of it are displayed.
- ② **Auto Delete** - Select the period for auto delete. The data stored before the set period will be deleted automatically.
  - ⊠ Delete all stored images older than the selected time.
- ③ **Overwrite** - If ON is selected, once the SD card has less than 8MB storage available, new data will start to overwrite the oldest data. If OFF is selected, once the SD card has less than 8MB available, the camera will stop recording to the SD card.
- ④ **Unmount** - Remove the SD card from the device.
- ⑤ **Format** - Delete all contents stored on the SD card.
- ⑥ Click 'Apply' to save all settings.
  - ⊠ Click 'Cancel' to return to the previous setting.

# Setup - Security Setup

## IP Address Filter Configuration

---

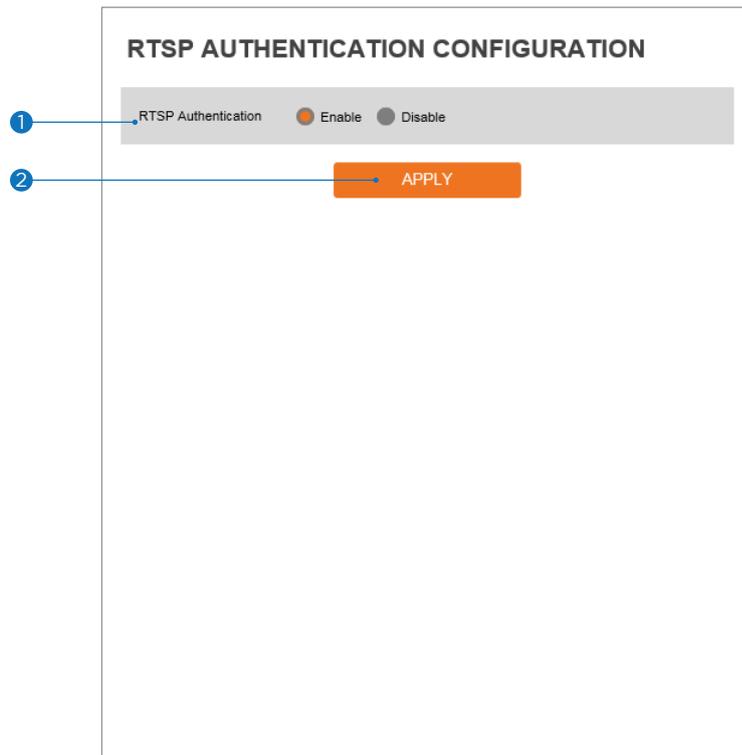

The screenshot displays the 'IP ADDRESS FILTER CONFIGURATION' interface. It is divided into two main sections: 'General Setting' and 'Filtered IP Address'. In the 'General Setting' section, there is a radio button for 'IP Address Filter' (with 'Off' selected), a dropdown menu for 'IP Filter Type' set to 'Allow', and an orange 'APPLY' button. The 'Filtered IP Address' section contains a large empty list box. Below this list is an input field for 'IP Address' with a placeholder '[ Invalid ]' and two orange buttons: 'ADD' and 'REMOVE'. Six numbered callouts (1-6) point to these specific elements: 1 points to the 'IP Address Filter' radio button, 2 to the 'IP Filter Type' dropdown, 3 to the 'APPLY' button, 4 to the 'Filtered IP Address' list box, 5 to the 'IP Address' input field, and 6 to the 'ADD' button.

- 1 **IP Address Filter** - Enable or disable this function.
- 2 **IP Filter Type** - Select the recording IP filter type.
- 3 Click 'Apply' to save all settings.
- 4 **Filter IP Address** - Display the filtered IP address.
- 5 **IP Address** - Define the IP address you want to apply the IP filter.
- 6 Click 'Add' to add the IP address to the list.
  - ⌘ Click 'Remove' to remove the IP address selected in the list.

# Setup - Security Setup

## RTSP Authentication Configuration

---

- 1 **RTSP Authentication** - Enable or disable the RTSP authentication.
- 2 Click 'Apply' to save all settings.

# Setup - Security Setup

## IEEE 802.1X Configuration

---

The screenshot shows the 'IEEE 802.1X CONFIGURATION' window. It has a 'General Setting' section with the following fields and controls:

- 1. IEEE 802.1x: A toggle switch with 'On' and 'Off' options.
- 2. Protocol: A dropdown menu currently set to 'MD5'.
- 3. EAPOL Version: A dropdown menu currently set to '1'.
- 4. ID: A text input field.
- 5. Password: A text input field.
- 6. Retype Password: A text input field.
- 7. CA Certificate: A dropdown menu currently set to 'NONE'.
- 8. Certificate: A dropdown menu currently set to 'NONE'.
- 9. APPLY: An orange button at the bottom right.

The feature is needed when connecting the camera to the network protected by the IEEE 802.1X.

- 1 **IEEE 802.1x** - Enable or disable the IEEE 802.1x feature.
- 2 **Protocol**
  - MD5: It provides one-way password-based network authentication of the client.
  - PEAP: It is similar to TTLS in that it does not require a certificate on the client-side.
  - TTLS/MD5: It does not require a certificate on the client-side.
  - TLS: It relies on client-side and server-side certificates to perform authentication.
- 3 **EAPOL Version** - Select the EAPOL Version.
- 4 **ID** - Type the ID to identify the client in the IEEE 802.1X authentication server.
- 5 **Password** - Type the Password to identify the client in the IEEE 802.1X authentication server.
- 6 **Verify** - Verify Password.
- 7 **CA Certificate** - Select the CA certificate required for TLS, TTLS, and PEAP authentication.
- 8 **Certificate** - Select the client certificate required for TLS authentication
- 9 Click 'Apply' to save all settings.

# Setup - Security Setup

## HTTPS Configuration

---

**HTTPS CONFIGURATION**

1. If no certificates are available go to certificates to manage.

**Certificates**

Certificate: NONE

**HTTPS connection Policy**

WEB: HTTP and HTTPS

ONVIF: HTTP

RTSP OVER HTTP: HTTP

APPLY

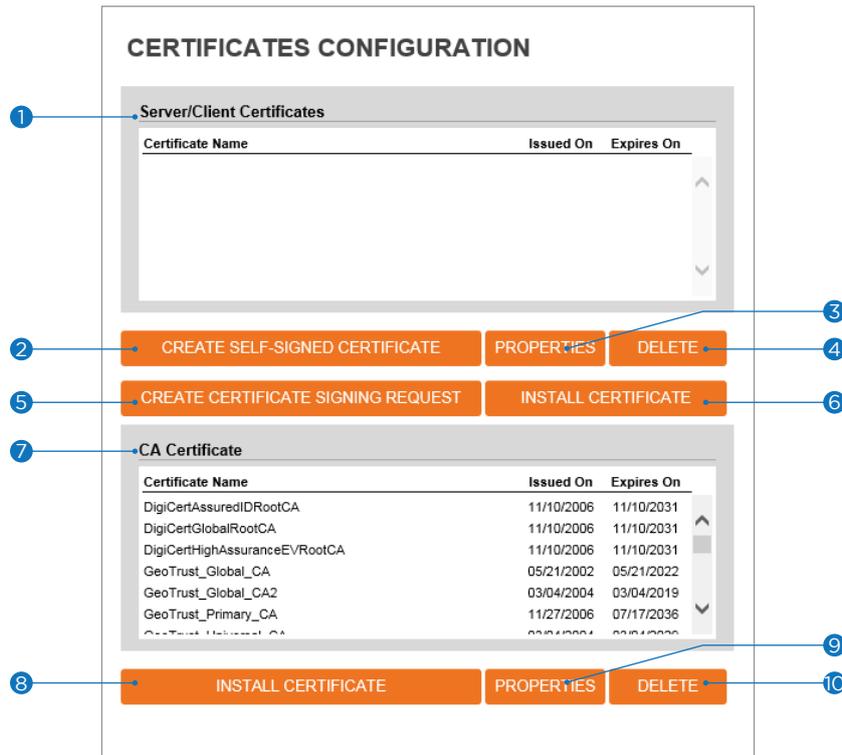

**HTTPS encrypts session data over SSL or TLS protocols instead of using plain text in socket communications.**

- 1 Certificate** - Select an installed certificate.
  - ⊠ If you cannot select a certificate, please install the certificate from the Security->Certificates menu.
- 2 HTTPS connection Policy** - Select one of “HTTP”, “HTTPS”, “HTTP and HTTPS” depending on the connected web, ONVIF, RTSP over HTTP.
  - WEB: “HTTP” “HTTPS” “HTTP and HTTPS”
  - ONVIF, RTSP OVER HTTP: “HTTP” “HTTPS” “HTTP and HTTPS”
- 3** Click ‘Apply’ to save all settings.
  - ⊠ When HTTPS mode is chosen, input https://<IP Address> to connect to the camera.

# Setup - Security Setup

## Certificates Configuration

---

- 1 **Server/Client Certificates** - Shows the installed certificates.
- 2 **Create Self-Signed Certificate** - A self-signed SSL certificate is an identity certificate signed by its creator. But they are considered to be less trustworthy.
- 3 **Properties** - Shows information about the selected certificate.
- 4 **Delete** - Delete the selected certificate.
- 5 **Create a Certificate signing request** - This is the encoded data that contains the necessary information for issuing the certificate.
  - ⚠ They must be filled in when creating the CSR (Certificate Signing Request).
- 6 **Install Certificate** - Install Certification
- 7 **CA Certificate** - Shows the installed CA certificates.
- 8 **Install CA Certificate** - Install Certification, see the detail page.
- 9 **Properties** - Shows information about the selected certificate.
- 10 **Delete** - Delete the selected CA certificate.

# Setup - Security Setup

## Certificates Configuration

---

### Detail for Install Certification.

- 1 **Certificate From Signing Request** - Select to install a signed certificate returned from the CA.
- 2 **Certificate And Private Key** - Select to install Certificate And Private Key to install a certificate and private key.
- 3 **Certificate Name** - Enter a unique name to identify a certificate.
- 4 **Select File** - Choose the certification file.
- 5 **OK** - Request installing a certificate.
- 6 **Cancel** - Cancel install certificate and then back to certificates configuration.

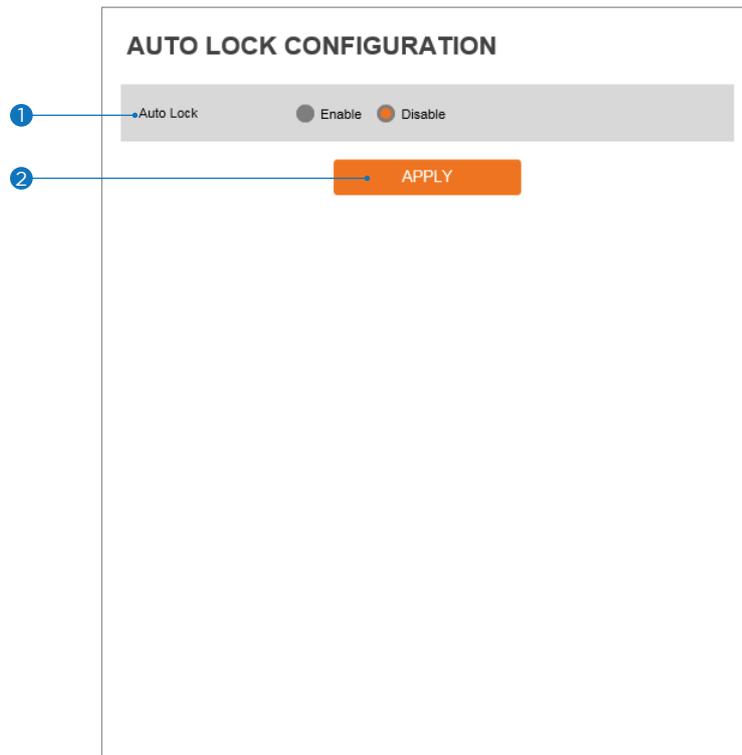

### Detail for Install CA Certification.

- 7 **Certificate Name** - Enter a unique name to identify the CA certificate.
- 8 **Select File** - Choose a CA certification file
- 9 **OK** - Request installing a CA certificate.
- 10 **Cancel** - Cancel installing a CA certificate and then back to certificates configuration.

# Setup - Security Setup

## Auto-Lock Configuration

---

- 1 **Auto Lock** - Enable or disable the function. When enabled, the system will lock itself for five (5) minutes after three (3) failed login attempts.
- 2 Click 'Apply' to save all settings.

# Setup - System Setup

## System Information

---

**SYSTEM INFORMATION**

1 Device Name IP-Camera

## Configuration Backup

---

**CONFIGURATION BACKUP**

1 Mode  Download  Upload

2 Backup Key

APPLY

Use this page to import or export the camera settings.

- 1 Select to download or upload camera settings.
  - ⚠ The following settings are NOT included in the backup files: Network (except RTSP information), System > user management, PTZ settings (on PTZ models).
  - ⚠ Download: save the camera's current settings. Check the box next to 'Download', enter a backup key and click APPLY. The backup key can be of any value. Remember the backup key, it will be required when uploading the file.
  - ⚠ Upload: upload configuration settings from another camera. Check the box next to 'Upload'. Enter the backup key for the configuration backup. Click 'Select File' to locate the configuration backup file and select it on your computer. The file name and upload status will appear. Click 'Apply' to start the upload. A popup window will appear when the configuration upload is complete.

### CONFIGURATION BACKUP

Mode  Download  Upload

Backup Key

Select File

pconf\_enc.tar

Ready to upload.

APPLY

⚠ **NOTE:**  
The configuration backup download is available when accessing the camera directly from the web browser. If accessing the camera from the DW Spectrum IPVMS client, this feature is disabled.

⚠ **Warning:**  
If the camera connection is abnormally terminated, a download button will appear on the diagnostics page to download and check the error information.

- 2 If needed, enter a backup key to identify your backup file.

# Setup - System Setup

## Firmware Update

---

**FIRMWARE UPDATE**

1. Do not power off during update. It may cause fatal system damage.  
2. If Explorer was closed abnormally or a user closed it accidentally while uploading firmware file, please try again after 30 seconds.  
3. Please do not select other menus while updating firmware file.

**1** • **Version Information**

System	2021.08.02_B11.2.2
Camera	-

**2** • **Web update**

Firmware File

**3** •

**FTP user information**

FTP Server Address	<input type="text" value="ftp.dwcc.tv"/>
FTP Port	<input type="text" value="21"/>
User ID	<input type="text" value="dwmpix"/>
Password	<input type="password" value="*****"/>
FTP Upload Path	<input type="text" value="/"/>

**1 Version Information** - It shows the current Firmware Version in the system.

**2 Web Update** - Select the Firmware file on your computer by clicking the [Select file] button.

**3 Start F/W Update** - Click this button to start the update. Progress of uploading will be displayed using Progress Bar. If you assign the wrong file name, an error message will be shown.

**⚠ Warning:**

1. Do not turn off the power to the camera during the firmware update. Interrupting the update may cause the system to become unstable. Once the update is completed, the system will reboot automatically.
2. Make sure to check the 'Notice' shown on the screen.  
If the firmware update is completed successfully, the camera will reboot and show the login window.

# Setup - System Setup

## Date & Time Settings

---

The screenshot shows the 'DATE&TIME SETTINGS' interface. It is divided into three main sections: 'Time Zone Setup', 'Time Format', and 'Current Date & Time'. The 'Current Date & Time' section is further divided into 'New Camera Date & Time' with three radio button options: 'Synchronize with my computer', 'Setup manually', and 'Synchronize with time server (NTP)'. The 'Synchronize with time server (NTP)' option is selected. There are three 'APPLY' buttons, one at the end of each section. Numbered callouts 1 through 7 point to the Time Zone dropdown, the Time Format dropdowns, the Current Date & Time input fields, the 'Synchronize with my computer' radio button, the 'Setup manually' radio button, the 'Synchronize with time server (NTP)' radio button, and the final 'APPLY' button respectively.

- 1 TimeZone Setup** - Choose the time zone for the camera. It will be activated after clicking the 'Apply' button.  
⚠ Before setting below 'New Camera Date and Time', set the correct time zone first.
- 2 Time Format** - Select the time format yy-mm-dd or mm/dd/yy.
- 3 Current Date and Time** - Current date and time setting in the Camera.
- 4 Synchronize with my computer** - Set the date/time using those of the PC currently connected.
- 5 Setup manually** - Set the date/time by typing manually.
- 6 Synchronize with time sever Time Zone (NTP)** - Choose the time server available to connect to the current camera. Date and Time will be updated automatically every hour when connected.
- 7** Click 'Apply' to save all settings.

# Setup - System Setup

## DST Settings

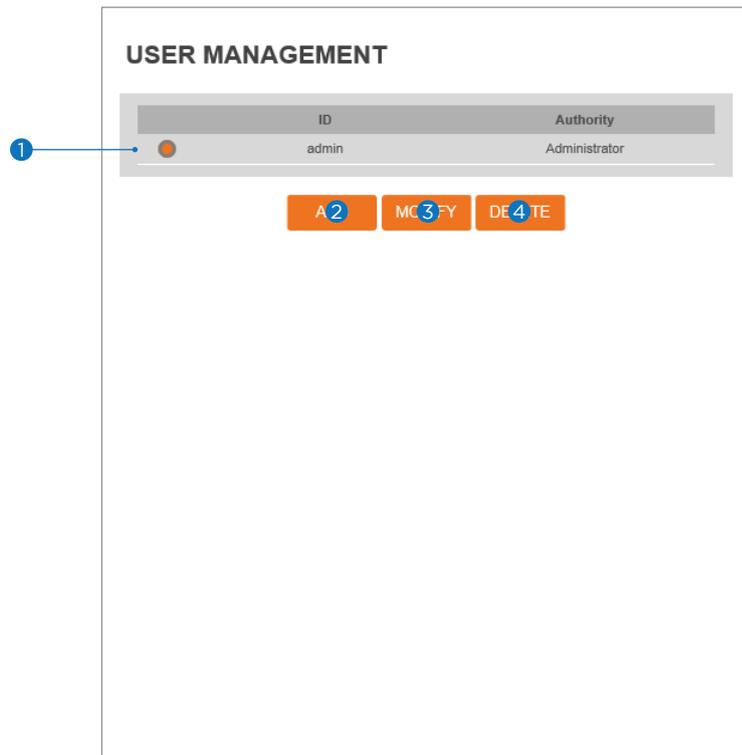

---

The screenshot shows the 'DST SETTINGS' configuration interface. It is divided into two main sections: 'General Setting' and 'Date&Time Settings'. The 'General Setting' section has two radio buttons: 'Off' (unselected) and 'On' (selected). The 'Date&Time Settings' section contains two rows of dropdown menus. The 'Start Time' row is set to 'Mar', 'Second', 'Sun', and '2 o'clock'. The 'End Time' row is set to 'Nov', 'First', 'Sun', and '2 o'clock'. Below these settings is an orange 'APPLY' button. Three blue callout boxes with numbers 1, 2, and 3 point to the 'General Setting' section, the 'Date&Time Settings' section, and the 'APPLY' button, respectively.

**Daylight Saving Time (DST) is the practice of setting the clocks forward one hour from standard time during the summer months, and back again in the fall, to make better use of natural daylight.**

- 1 **General Setting** - Enable or disable the DST function.
- 2 **Date and Time Settings** - Set the start time and end time that the DST applies.
- 3 Click 'Apply' to save all settings.

# Setup - System Setup Users Management

1 **Users** - List all the user accounts for authentication.

2 **Add** - Register a new user.

ID	Enter a new user ID except Admin since it exists.
Password	Enter the user Password. (Check the Password)
Verify	Enter the user Password again for verification.
User Authority	Select Operator or Viewer. Viewer : Only monitoring is allowed. Operator : Most of the functions are allowed except 'Setup'.

The screenshot shows the 'USER MANAGEMENT' form for adding a new user. It has the following fields: 'ID' (with 'admin' entered), 'Password' (with a placeholder '[ Type the Password ]'), 'Retype Password', 'Password Hint', and 'UserAuthority' (with 'Administrator' selected in a dropdown menu). Below the form, there are two orange buttons: 'APPLY' and 'CANCEL'. A password requirement note is displayed at the bottom of the form: 'Password requirement : minimum 8 characters with at least four combinations of uppercase letters, lowercase letters, numbers and special characters. Acceptable special characters are: ~ ! \$ ^ ( ) \_ - { } [ ] ; . ? / Passwords cannot contain ID.'

- ⊠ The ID and Password are limited to 8 characters with at least two combinations of uppercase letters, lowercase letters, numbers and special characters.  
Acceptable special characters are: ~ ! \$ ^ ( ) \_ - { } [ ] ; . ? /

Click 'Save' to save all settings.

- ⊠ Click 'Cancel' to return to the previous menu.

3 **Modify** - Modify the information of the user accounts registered. For the admin account, only the password can be modified.

4 **Delete** - Delete the selected user account. The admin account cannot be deleted.

# Setup - System Setup

# Setup - System Setup

## Plug-In

1 **Plug-in List** - View all plug-ins currently installed on the camera.

2 **Configuration** - Show the settings for the selected plug-in from the list.

---

**Start/Stop** - Start/stop the selected plug-in from the list.

---

**Uninstall** - Remove the selected plug-in from the list.

---

**Logs** - Download the log file for the selected plug-in from the list.

---

3 **Information** - View additional information for the plug-in selected from the list.

4 **Plug-in Update** - Once a plug-in is selected from the list, press the 'select file' button to upload a new plug-in file located on your drive.

⚠ Note the available local storage on the camera before updating a plug-in. You may need to remove some plug-ins to have enough storage for a new plug-in.

5 **Upload Plug-In** - Once a new plug-in file is selected, click the 'UPLOAD PLUG-IN' button to start the update. The Progress Bar will indicate the uploading progress.

⚠ See the MEGApix® IA™ user manual for more information on the analytics plug-ins, settings and activation.

# Network Setup - Quick Start of Network Connection

---

## Follow the steps below to complete the initial network setup.

- i** Do not power on the IP camera until instructed.
- i** Temporarily disable any proxy servers configured in Internet Explorer.
- i** If connecting the IP camera directly to a modem, power down and reset the modem. Leave the modem powered down until the camera's configuration is complete and the IP Camera has been connected to the modem.

- 1 Connect the IP camera to the configured network.
- 2 Open the DW IP Finder on a PC on the same network as the camera and search for the camera.

- i** If you have a DHCP server, it will automatically set the camera's IP address and network settings.
- i** If you do not have a DHCP server, the camera's IP address is set by default to 192.168.1.80 after one minute. In this case, the PC's IP address must be changed to match the camera's IP address settings to be able to access the camera.

- 3 If multiple cameras are added at the same time, each camera can be identified by its mac address.
- 4 Click on the camera's IP address and connect to the web page.
- 5 Default ID/password are both: admin.
- 6 Familiarize yourself with the viewer interface.
- 7 Install VLC to display live video.
- 8 The camera's IP address settings can be set to 'STATIC' from the DW IP Finder or the camera's web viewer by going to Setup -> Network -> Network Settings.
- 9 If the IP camera is connected to a network with a router, you must have port forwarding configured on your router to access the camera from outside the network.
- 10 After configuring port forwarding on your router (if necessary), access your IP camera by opening Internet Explorer and typing the IP address and web port assigned to the IP camera.

- i** Example: <http://192.168.0.200:8888>
- i** If your web port is 80, you do not need to specify the port in the address bar to access to your IP camera.

- 11 Access your IP Camera via the Internet (from a different network from the one your camera is):

---

If you use a static IP address assigned by your ISP:

1. Open Internet Explorer.
2. Type the address of the IP camera.
3. If you use a router, enter the routers' static IP and the web port number of the IP camera.

---

If you have a dynamic address provided by your ISP

1. Open Internet Explorer and go to your DDNS website.
  2. Register the IP camera.
  3. Reboot the IP camera.
  4. Give the DDNS server 10 minutes to locate your IP camera's IP information.
  5. Click the refresh button in Internet Explorer.
  6. After your camera is connected, select your camera.
-

# Network Setup - DDNS Registration

---

**If you have a DYNAMIC IP service from your Internet Service Provider (ISP), you cannot tell the current IP address of the IP Camera. To solve this problem, you must register with our DDNS service.**

**First, you must check if you are using dynamic addressing. If so, register your IP Video Server on our DDNS website before you configure, setup, or install the IP Camera.**

**Even though your IP is not dynamic, you will benefit by registering your device with a DDNS service. In this case, just remember 'hostname.dyndns.com/gate1' instead of a complicated series of numbers like `http://201.23.4.76:8078`.**

**For more details, contact our Support Center.**

✘ To use a public DDNS called 'DynDNS' or 'no-IP', refer to the detailed information on how to use the service. (Visit: <http://www.dyndns.com> or <http://www.no-ip.com>)

# Network Setup - Guide to the Network Environment

**Please configure the IP Camera at the installation site. You must determine your network scenario to configure the IP Camera with the proper TCP/IP settings. This tutorial will guide you through the process. Before actually configuring the IP Camera, determine settings to be applied. Record those settings to be used to configure your IP Camera for reference.**

**When configuring your IP Camera, treat the IP Camera as another PC on your network. You will assign it to several addresses and other TCP/IP properties to match your current network.**

**This step-by-step tutorial will teach what IP addresses and network configurations should be assigned based on the network scenario.**

- 1 Before you begin, locate any information and settings received from your Internet Service Provider (ISP). You may need to refer to these IP addresses at a later time during the configuration.

Current TCP/IP Settings	
IP Address	
Subnet Mask	
Default Gateway	
Primary DNS Server	
Secondary DNS Server (Option)	

Static  Dynamic

**i** If you were not given any IP addresses or the ISP was responsible for the setup and installation of your Internet connection, go to step 2.

**i** If you are not using a router on your network, your 'Current TCP/IP Settings' (from the previous section) and 'Assigned IP Addresses from My ISP' will be exactly the same.

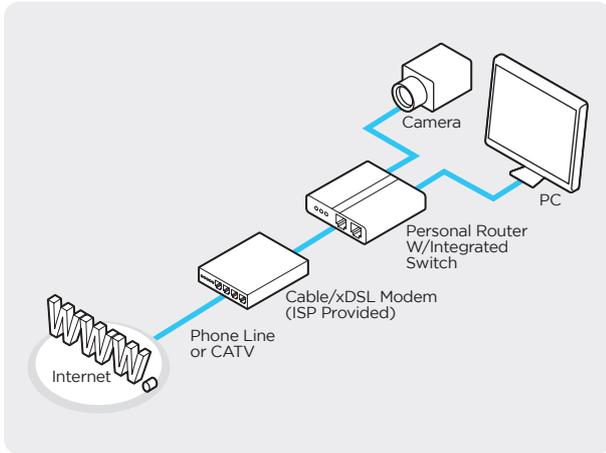

- 2 You must determine whether the IP address is STATIC or DYNAMIC. Contact your ISP to get a STATIC IP address for the camera.
- 3 Configure your IP Camera's TCP/IP settings for network connectivity by selecting Setup from the main interface and selecting TCP/IP located on the left of the setup screen.

- 4 If prompted for ID and password, use 'admin' for both entries. The default web port number is 80. If port 80 is blocked by the ISP, use a value between 1025 - 60000. If TCP port 80 is blocked, contact your ISP.
- 5 The following descriptions are several basic network scenarios. Determine which scenario describes your network. If your network does not match one of the scenarios below and you are unsure how to setup your IP camera, contact your network administrator.

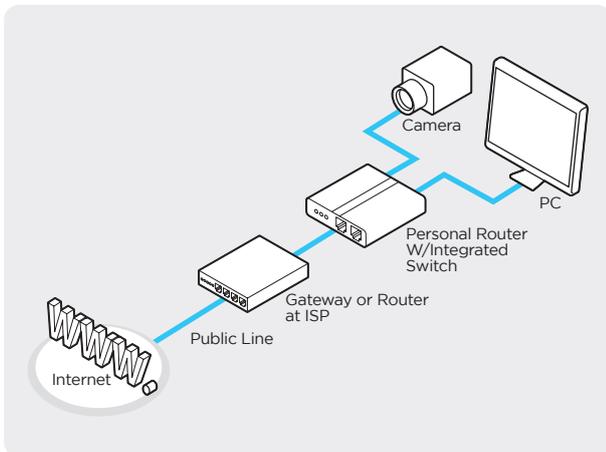

**i** You cannot control the rectangular gray areas and only the ISP has access to the devices.

# Network Setup - Setup Case A, B

## Case A: Dynamic IP + Personal Router [Most SOHO]

## Case B: Static(Fixed) IP + Personal Router [Efficient]

## Configure your IP Camera's TCP/IP properties:

1 Network Type: STATIC (even though you have Dynamic IP from your ISP, use STATIC on the IP camera).

2 Internet Address: A private IP address such as 192.168.0.200 (example)

**i** You need to assign an IP address to the IP Camera just as you do with PC.

**i** The IP address you assign must be unique to your network and match your network as well.

For information on how to choose a unique IP and match your network, read the FAQ.

**i** The IP address you assign must be a private IP.

For information on how to choose a private IP please, read the FAQ.

3 Subnet Mask: 255.255.255.0 (example)

**i** You must use the same subnet mask as the one you noted under 'Current TCP/IP Settings'.

4 Default Gateway: 192.168.0.1 (example)

**i** This IP address must be the IP address of your router. (private or LAN side)

**i** Use the same Default Gateway you noted under 'Current TCP/IP Settings'.

5 Preferred DNS Server: Use the 1st DNS Server from 'Assigned IP Address from My ISP'.

**i** If you did not receive any IP addresses from your ISP, contact the ISP and acquire the IP address of their DNS server.

6 DDNS Server: Use the DDNS server.

**i** This is the same site you will register later to accommodate dynamic IP from your ISP.

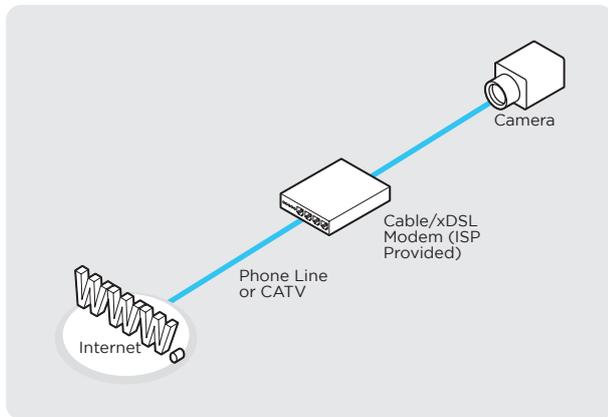

7 Web Port: 8888

**i** Do not use the default port 80 as this number must be changed.

**i** Select a number between 1025 - 60000.

# Network Setup - Setup Case C, D

## Case C: Static(Fixed) IP [Dedicated line directly to the IP Camera]

### Configure your IP Camera's TCP/IP properties:

- 1 Network Type: STATIC
- 2 Internet Address: A static IP address received from your ISP such as 24.107.88.125 (example)

**i** You need to assign an IP address to the IP Camera just as you do with PC.

- 3 Subnet Mask: Subnet mask assigned from your ISP such as 255.255.255.240 (example)
- 4 Default Gateway: 24.107.88.113 (example)

**i** Use the assigned default gateway from your ISP.

- 5 Preferred DNS Server: Use the 1st DNS Server from 'Assigned IP Address from My ISP'

**i** If you have not received any IP addresses from your ISP, contact them to acquire the IP address of their DNS server.

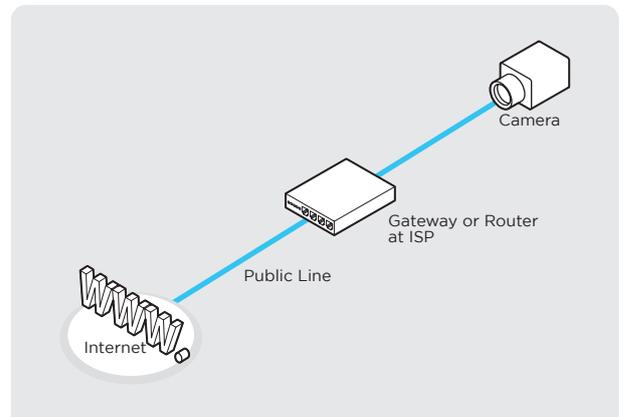

- 6 DDNS Server: Use the DDNS server

**i** This is the same site you will register later to utilize our DDNS service.

- 7 Web Port: 80

**i** Select a number between 1025 - 60000.

## Case D: Dynamic IP + DSL/Cable Modem [Connected directly to the IP Camera]

- 1 To connect the IP Camera directly to a modem, power down and reset the modem. Leave the modem powered down until the IP camera's setup is completed and the IP camera has been connected to the modem. Then power on the modem, followed by the IP camera.

### Configure your IP Camera's TCP/IP properties:

- 1 Network Type: DYNAMIC
- 2 DDNS Server: Use the DDNS server

**i** This is the same site you will register later to accommodate dynamic IP from your ISP.

- 3 Web Port: 80

**i** Select a number between 1025 - 60000.

# Network Setup - Port Forwarding

---

**After entering the correct TCP/IP settings, you are ready for 'Port Forwarding' (Cases A, B).**

- 1 Use the table below to note your camera's TCP/IP settings for future reference. You may need this information to access your IP Camera and to configure 'port forwarding'.

IP camera TCP/IP settings	
IP address	
Subnet mask	
Default gateway	
Preferred DNS server	
DDNS server	
Web port	

- 2 After clicking 'Apply', the system will prompt for a reboot. Please allow the system 50 seconds to reboot and accept the changes. After 50 seconds, close the configuration screen. The view will display 'Trying to Reconnect'.  
If the ACTIVE light on the IP Camera has gone off and is now back on again flashing, the IP Camera has rebooted. After the system reboots completely, remove the power supply from the unit and close Internet Explorer.
- 3 Return your PC/Laptop TCP/IP properties to their original settings.
- 4 Before installing the IP camera, you must perform port forwarding on your router (Cases A, B).  
You will need to forward 1 port:
  - Web Port: All the ports will be forwarded to the IP address you assigned to the IP Camera.  
In the example above, you would forward:
    - 8888 > 192.168.0.200

# Network Setup - Starting IP Camera

---

**After forwarding correctly the Web Port, through your router (if applicable), install the IP Camera in a proper location.**

- 1 Locate the serial number located on the label attached to the bottom of the IP camera, you will need this for DDNS registration.
- 2 Connect the IP Camera to your router or cable/DSL modem (per your network scenario) via a Cat5/5e UTP Ethernet network cable.
- 3 Supply power to the IP camera.
- 4 After 1 minute, verify the IP camera indicators:
  - LINK: Flickering/Solid
- 5 After configuring port forwarding on your computer (if necessary), access your IP camera on your local network by opening Internet Explorer and specifying the IP address and web port assigned to the IP camera.

**i** Examples: <http://192.168.0.200:8888> or <http://24.106.88.123>

**i** If you left your web port as 80, you do not need to specify the port in the address bar to access the IP camera.

- 6 Access your IP camera via the Internet :

---

If you use cases B, C:

1. Open Internet Explorer.
2. Type the address of the IP camera.
3. If you use a router, enter the routers' static IP and the web port number of the IP camera.

---

If you use cases A, D:

1. Open Internet Explorer and go to your DDNS website.
2. Register the IP camera.
3. Reboot the IP camera.
4. Give the DDNS server 10 minutes to locate your IP camera's IP information.
5. Click the refresh button in Internet Explorer.
6. After your camera is connected, select your camera.

**i** The difference between B and C is that B needs to set the port forwarding.

**i** Since the type of DDNS differs from the service type, refer to the related service site.

# Appendix

## FAQ

---

### 1. My POWER light is not on?

Power is not being supplied to the unit. Please use the power supply shipped with the unit and verify that a power source is active from the attached power outlet used to connect the adapter. You can test this by plugging in any other electrical device and verify its operation. After using the power supply shipped with the product, check the power source, and reinserting the power connector into the IP Camera, please call our Support Center. The power supply may be defective.

### 2. My ACTIVE light is not flashing?

Verify the power supply to the unit. Power off the unit and back on again, wait 1 minute, if the ACTIVE light still does not begin to flash, you will have to set the unit to its factory default (THIS WILL DELETE ANY CONFIGURATION AND SET THE UNIT TO THE FACTORY DEFAULTS). Power on the unit and insert the end of a paper clip into the small recessed opening on the back of the unit. Use the clip to press the button located within that opening.

### 3. My LINK light is not flashing or solid?

Verify the cable connection. 99% of the time the cable's connection to the unit is causing this problem. Try using a different network cable or crossover cable (for PC connection only). Try reinserting the cable, if this still doesn't solve the problem call our Support Center.

### 4. I can access the video server on my LAN, but not from the Internet.

Verify that your router (if applicable) has port forwarding properly configured. If accessing from our DDNS service, verify the correct serial number. Firewall issues may prevent user access.

### 5. How do I open an MS-DOS or Command Prompt?

Start > (All) Programs > Accessories > Command Prompt

### 6. How do I find out my IP address information if my settings were automatically detected?

1) Open a Command Prompt  
2) At the prompt type - "ipconfig / all" (without the quotes)  
3) Near the end of the information supplied, should be your current IP address, subnet mask, default gateway and DNS servers

### 7. I can't connect!!

In the case of a connection failure.  
Modem Reboot > Modem Reboot Finished > Router Reboot > Router Reboot Finished > IP Camera Reboot > IP Camera Reboot Finish > Verify DDNS and IP Camera connection, if applicable.

### 8. How do I "PING" an IP address?

1) Open an MS-DOS (or Command) prompt  
2) At the prompt type - "ping xxx.xxx.xxx.xxx" (without the quotes and replace the "x" s with an IP address)  
3) Press Enter

### 9. I'm accessing my video server remotely over the Internet and the video stream is choppy, is this normal?

Yes. The frames per second received remotely are determined by your bandwidth capabilities both at your site where the IP Camera is installed and your remote location. The lower of the two sites will determine how fast your video stream is received. It is recommended to have at least a 256Kb/sec upstream connection from the site where the IP Camera is installed. Lower speeds will operate properly but provide poor remote performance. The Faster the Internet connection at both ends, the faster the video stream.

### 10. How do I enable or check VLC on my browser

---

Internet Explorer

Open Internet Explorer > Tools on the menu bar > Internet Options > Security Tab > Custom Level > Scroll down and verify that you are prompted or have enabled plug-ins to be downloaded and executed. > click OK > restart browser.

---

Chrome

Open Chrome > Chrome menu settings > Advanced settings > Individual information - content settings > Run automatically

---

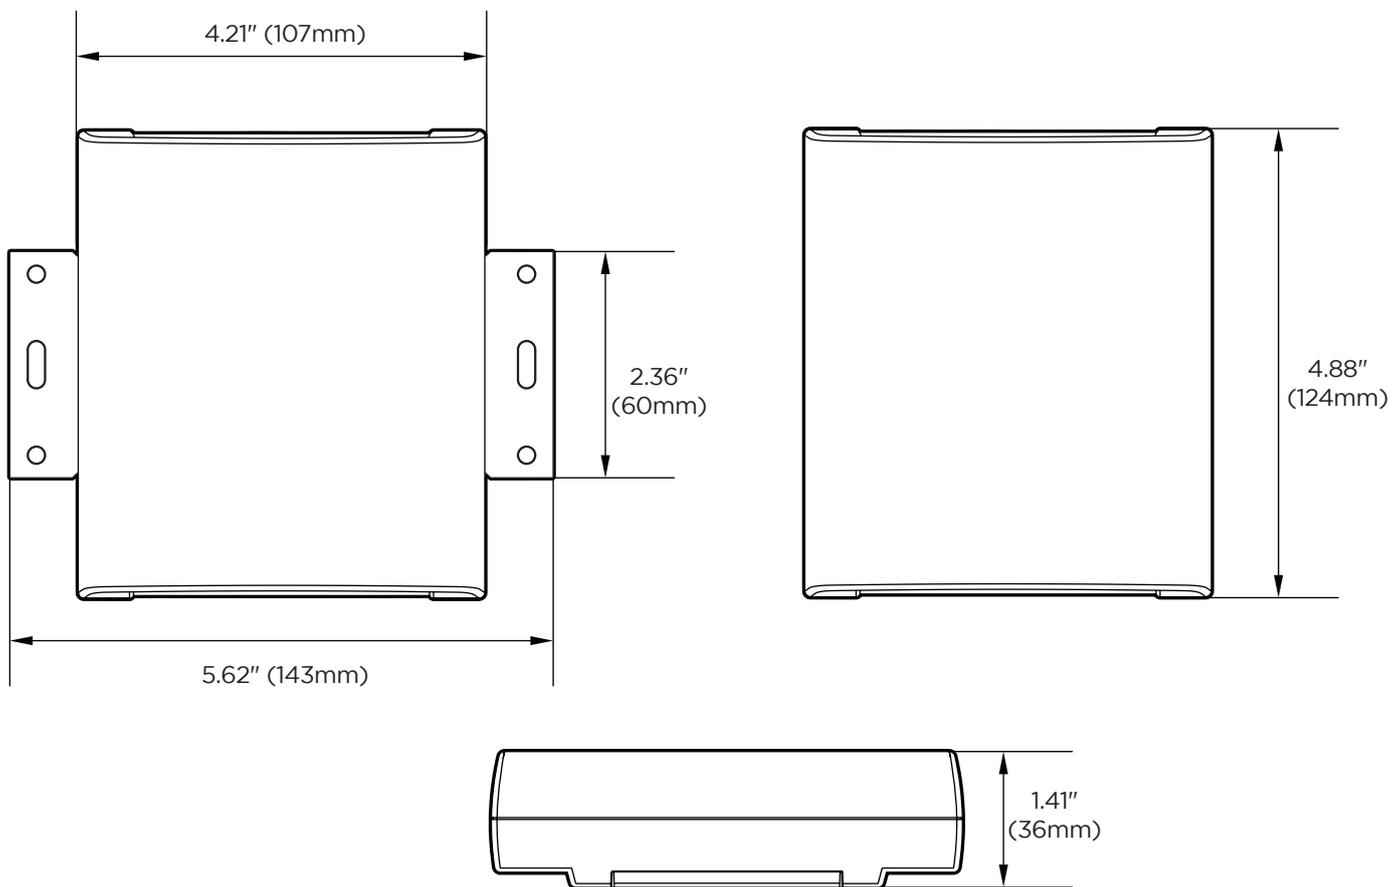

### 11. How do I reset the unit to factory defaults?

Refer to the previous functions page and find the reset button. Power ON the unit and use a paper clip to push the reset button within that opening. You should then see the ACTIVE light turn off and after a few seconds, the ACTIVE light will begin to flash, signifying a successful reboot. If the ACTIVE light does not turn off after depressing the reset button, please try holding the button in for a few seconds and releasing it. YOU WILL LOSE ALL DATA THAT HAD BEEN ENTERED PREVIOUSLY AND THE IP CAMERA WILL BE SET TO ITS FACTORY RESET.

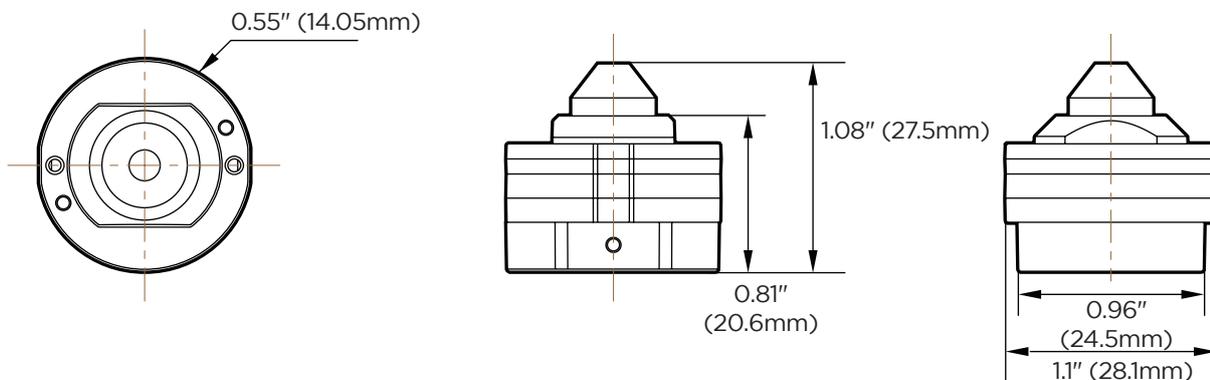

# Specifications - Dimensions

Unit: (inches) mm

## Main Unit:

## Camrea Sensor:

# Specification - Technical

CAMERA	
Image Sensor	1/2.8" 2.1MP/1080p CMOS
Total Pixels	1945(H) X 1109(V)
Focal Length	2.8mm, F2.2
Horizontal Angle	D: 123.9°, H: 106.6°, V: 55.7°
Shutter Speed	Auto, Manual (1/15 - 1/32000), Anti-Flicker, Slow Shutter (off, 2X, 3X, 5X, 6X, 7.5X, 10X)
MIN. Illumination	2.8mm: 0.065 Lux (F2.2)
IR	N/A
Day and Night	Color only
WDR	WDR (DOL)
DNR	3D-DNR
Privacy Zone	16 Programmable Zone
AGC	Auto
Other Image Processing	Configurable Exposure, White Balance, Sharpness

ENCODER (VIDEO AND AUDIO)	
Video Compression	H.265, H.264, MJPEG
H.265 Profile	MP
H.264 Profile	BP / MP / HP
Multiple Profile Streaming Performance	H.265: 2.1MP/1080p, 720p, 640x360, CIF, SIF H.264: 2.1MP/1080p, 720p, 640x360, CIF, SIF MJPEG: 2.1MP/1080p, 720p, 800x600, 768x432, 704x576, 480p, VGA, 640x360, CIF, SIF
Video Bitrate	100kbps ~ 10Mbps, Multi-rate for Preview and Recording
Bitrate Control	Multi Streaming CBR/VBR at H.264, H.265 (Controllable frame rate and Bandwidth)
Edge Storage	Micro SD, Micro SDHC, Micro SDXC (card not included)
Special Feature	Smart LBR, ROI

I/O AND EVENT	
Audio In/Out	N/A
Alarm In/Out	1 / 1
Video Output (2nd Video Out)	N/A
Event Notification	FTP, E-mail, Alarm out, SD card

SECURITY AND NETWORK	
Network Protocol	IPv4: TCP/IP, UDP, AutoIP, RTP(UDP/TCP), RTSP, NTP, HTTP, HTTPS, SSL, DNS, DDNS, DHCP, FTP, SMTP, ICMP, SNMPv1/v2/v3 (MIB-2), ONVIF
Security	HTTPS (TLS), IP filtering, 802.1x, Digest Authentication (ID/PW)
Plug-In	CGI, API, ONVIF
Other Certifications	CE, FCC, RoHS

GENERAL	
Power	DC 12V, PoE IEEE 802.3af Class 3. (Adapter not included) DC12V: 3.6W PoE: 4W
Temperature	-4°F ~ 122°F (-20°C ~ 50°C)
Humidity	10-90% (non-condensing)
Material	Sensor Camera: Aluminum die-casting Main unit: Plastic
Dimensions	Main unit: 4.21" x 4.88" x 1.41" (107 x 124 x 36mm) Camera sensor: 1.1" x 1.08" (28.1 x 27.5mm) Cable length: 21.32ft (6.5m)
Weight	0.92 lbs (0.42 kg)

# Warranty Information

---

**Digital Watchdog** (referred to as “the Warrantor”) warrants the Camera against defects in materials or workmanship as follows:

**Labor:** For the initial five (5) years from the date of the original purchase if the camera is determined to be defective, the Warrantor will repair or replace the unit with the new or refurbished product at its option, at no charge.

**Parts:** Also, the Warrantor will supply replacement parts for the initial two (2) years.

To obtain warranty or out of warranty service, please contact a technical support representative at:

1+ (866) 446-3595, Monday through Friday from 9:00 AM to 8:00 PM EST.

A purchase receipt or other proof of the date of the original purchase is required before warranty service is rendered. This warranty only covers failures due to defects in materials and workmanship which arise during normal use. This warranty does not cover damages that occurs in shipment or failures which are caused by products not supplied by the Warrantor or failures which result from accident, misuse, abuse, neglect, mishandling, misapplication, alteration, modification, faulty installation, setup adjustments, improper antenna, inadequate signal pickup, maladjustments of consumer controls, improper operation, power line surge, improper voltage supply, lightning damage, rental use of the product or service by anyone other than an authorized repair facility or damage that is attributable to acts of God.

# Limits and Exclusions

---

There are no express warranties except as listed above. The Warrantor will not be liable for incidental or consequential damages (including without limitation, damage to recording media) resulting from the use of these products, or arising out of any breach of the warranty. All express and implied warranties, including the warranties of merchantability and fitness for a particular purpose, are limited to the applicable warranty period set forth above.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusions or limitations may not apply to you. This warranty gives you specific legal rights and you may also have other rights from vary from state to state.

If the problem is not handled to your satisfaction, then write to the following address:

Digital Watchdog, Inc.  
ATTN: RMA Department  
16220 Bloomfield Ave  
Cerritos, CA 90703

Service calls which do not involve defective materials or workmanship as determined by the Warrantor, in its sole discretion, are not covered. Cost of such service calls are the responsibility of the purchaser.
